Piezoelectric Horn Driver Circuit

Features:
- Low Quiescent Current (< 100 nA)
- Low Driver R<sub>ON</sub> – 20Ω typical at 9V
- Wide Operating Voltage Range
- Available in 8-pin DFN, PDIP and SOIC packages

General Description:
The RE46C100 devices are intended for applications using a self oscillating piezoelectric horn, although it can be used in direct drive applications. Feedback control and a driver circuit are provided, as well as a horn enable function.
The RE46C100 is intended for use in smoke detectors, CO detectors, personal security products and electronic toys.

Functional Block Diagram

Package Types

* Includes Exposed Thermal Pad (EP); see Table 2-1.
Typical Application

**Note 1:** Place C2 close to the device power pins to minimize horn switching noise.
1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†
Supply Voltage.............................. VDD = 18 V
Input Voltage Range Except FEED, TEST........ VIN = -0.3 V to +0.3 V
FEED Input Voltage Range ................. VINFD = 10 to +22 V
Input Current except FEED ..................... IIN = 10 mA
Operating Temperature...................... TA = -40 to +85°C
Storage Temperature ....................... TSTG = -55 to +125°C
Maximum Junction Temperature .............. TJ = +150°C

† Notice: Stresses above those listed under “Maximum ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

3.0 DEVICE DESCRIPTION

The RE46C100 horn driver provides the circuitry necessary to drive a three-terminal self-oscillating piezoelectric horn. It can also drive a two-terminal piezoelectric horn with the FEED pin used as a signal input. The horn driver provides a push-pull circuit to drive the horn, as shown in the Typical Application circuit.

In a self-oscillating application, the FEED pin is connected to the feedback pin of the piezoelectric horn through a resistor. To drive a two-terminal piezoelectric horn with an external signal, the FEED pin should be used as the external signal input. The horn is enabled when HRNEN is driven to a logic high and is silenced when HRNEN is driven to a logic low. The horn output can be modulated using the HRNEN input.
4.0 PACKAGING INFORMATION

4.1 Package Marking Information

Legend:
- **XX...X**: Customer-specific information
- **Y**: Year code (last digit of calendar year)
- **YY**: Year code (last 2 digits of calendar year)
- **WW**: Week code (week of January 1 is week '01')
- **NNN**: Alphanumeric traceability code
- **(e3)**: Pb-free JEDEC designator for Matte Tin (Sn)

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.
8-Lead Plastic Dual Flat, No Lead Package (MC) – 2x3x0.9 mm Body [DFN]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging

APPENDIX A:  REVISION HISTORY

Revision B (June 2014)

The following is the list of modifications:
1. Added new package to the family (2x3 DFN) and related information throughout the document.
2. Added thermal package resistance information in Temperature Specifications.
3. Added package markings and drawings for all packages.

Revision A (May 2009)

• Original Release of this Document.
PRODUCT IDENTIFICATION SYSTEM

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company’s quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, Keeloq® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip’s quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
