Features

- 13.2-450V Input Voltage Range
- Adjustable 1.20-438V Output Regulation
- 5% Output Voltage Tolerance
- Output Current Limiting
- 10 µA Typical ADJ Current
- Internal Junction Temperature Limiting

Applications

- Offline SMPS startup circuits
- Adjustable high-voltage constant current source
- Industrial controls
- Motor controls
- Battery chargers
- Power supplies

General Description

LR8 is a high-voltage, low-output current, adjustable linear regulator. This regulator has a wide operating input voltage range of 13.2-450V. The output voltage can be adjusted from 1.20-438V, provided that the input voltage is at least 12V greater than the output voltage. The output voltage can be adjusted by means of two external resistors, R₁ and R₂, as shown in the typical application circuits. LR8 regulates the voltage difference between \( V_{OUT} \) and ADJ pins to a nominal value of 1.20V. The 1.20V is amplified by the external resistor ratio \( R_1 \) and \( R_2 \). An internal constant bias current, of typically 10 µA, is connected to the ADJ pin. This increases \( V_{OUT} \) by a constant voltage of 10 µA times \( R_2 \).

LR8 provides both current and temperature limiting. The output current limit is typically 20 mA and the minimum temperature limit is +125°C. An output short-circuit current will therefore be limited to 20 mA. When the junction temperature reaches its temperature limit, the output current and/or output voltage will decrease to prevent the junction temperature from exceeding its temperature limit. For SMPS start-up circuit applications, LR8 turns off when an external voltage greater than the output voltage of the LR8 is applied to \( V_{OUT} \) of the LR8. To maintain stability, a bypass capacitor of 1.0 µF or larger and a minimum DC output current of 500 µA are required.

LR8 is available in TO-243AA (SOT-89), TO-252 (D-PAK) and TO-92 packages.
LR8

Package Type

See Table 2-1 for pin information

V_{IN}  Input voltage (voltages ref to ADJ).......................................................................................................................-0.5 to +480V
Output voltage range...........................................................................................................................................................0.5 to +470V
Operating ambient temperature range...........................................................................................................................-40°C to +85°C
Operating junction temperature range..........................................................................................................................-40°C to +125°C
Storage temperature ..................................................................................................................................................-65°C to +150°C

† Notice: Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

4.0 PACKAGING INFORMATION

4.1 Package Marking Information

Legend:

XX...X  Product Code or Customer-specific information
Y      Year code (last digit of calendar year)
YY     Year code (last 2 digits of calendar year)
WW     Week code (week of January 1 is week '01')
NNN    Alphanumeric traceability code
3e     Pb-free JEDEC® designator for Matte Tin (Sn)
*      This package is Pb-free. The Pb-free JEDEC designator (3e) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications.
