TC1264

800 mA Fixed-Output CMOS LDO with Shutdown

Features
- Very Low Dropout Voltage
- 800 mA Output Current
- High Output Voltage Accuracy
- Standard or Custom Output Voltages
- Overcurrent and Overtemperature Protection

Applications
- Battery Operated Systems
- Portable Computers
- Medical Instruments
- Instrumentation
- Cellular/GSM/PHS Phones
- Linear Post-Regulators for SMPS
- Pagers

Typical Application

Description
The TC1264 is a fixed output, high accuracy (typically ±0.5%) CMOS low dropout regulator. Designed specifically for battery-operated systems, the TC1264’s CMOS construction eliminates wasted ground current, significantly extending battery life. Total supply current is typically 80 µA at full load (20 to 60 times lower than in bipolar regulators).

TC1264 key features include ultra low noise operation, very low dropout voltage (typically 450 mV at full load), and fast response to step changes in load.

The TC1264 incorporates both over temperature and over current protection. The TC1264 is stable with an output capacitor of only 1 µF and has a maximum output current of 800 mA. It is available in 3-Pin SOT-223, 3-Pin TO-220 and 3-Pin DDPAK packages.
1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

Input Voltage .........................................................6.5V
Output Voltage.................. (VSS – 0.3V) to (VIN + 0.3V)
Power Dissipation................Internally Limited (Note 8)
Maximum Voltage on Any Pin ........V IN +0.3V to -0.3V
Operating Temperature Range...... -40°C < TJ < 125°C
Storage Temperature......................-65°C to +150°C

† Notice: Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

</tbody>
</table>

Note 1: VR is the regulator output voltage setting.

2: The minimum V IN has to justify the conditions: V IN ≥ VR + VDROPOUT and V IN ≥ 2.7V for I L = 0.1 mA to IOUTMAX.

3: This accuracy represents the worst-case over the entire output current and temperature range.

4: 

\[
TCV_{OUT} = \frac{(V_{OUTMAX} - V_{OUTMIN}) - 10^6}{V_{OUT} \times \Delta T}
\]

5: Regulation is measured at a constant junction temperature using low duty cycle pulse testing. Load regulation is tested over a load range from 0.1 mA to the maximum specified output current. Changes in output voltage due to heating effects are covered by the thermal regulation specification.

6: Dropout voltage is defined as the input-to-output differential at which the output voltage drops 2% below its nominal value measured at a 1.5V differential.

7: Thermal regulation is defined as the change in output voltage at a time T after a change in power dissipation is applied, excluding load or line regulation effects. Specifications are for a current pulse equal to I LMAX at VIN = 6V for T = 10 ms.

8: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction-to-air (i.e., TJ, 0JA). Exceeding the maximum allowable power dissipation causes the device to initiate thermal shutdown. Please see Section 5.0 “Thermal Considerations” for more details.
### DC CHARACTERISTICS (CONTINUED)

**Electrical Specifications:** Unless otherwise indicated, \( V_{IN} = V_R + 1.5V \) (Note 1), \( I_L = 100 \ \mu A, C_L = 3.3 \ \mu F, \ \text{SHDN} > V_{IH}, \ T_A = +25^\circ C \). **Boldface** type specifications apply for junction temperatures of -40°C to +125°C.

</tbody>
</table>

3.1 Unregulated Supply ($V_{IN}$)  
Unregulated supply input.

3.2 Ground (GND)  
Ground terminal.

3.3 Regulated Output Voltage ($V_{OUT}$)  
Regulated voltage output.
4.0 DETAILED DESCRIPTION

The TC1264 is a precision, fixed output LDO. Unlike bipolar regulators, the TC1264’s supply current does not increase with load current. In addition, $V_{OUT}$ remains stable and within regulation over the entire 0mA to $I_{LOAD\text{MAX}}$ load current range (an important consideration in RTC and CMOS RAM battery back-up applications).

Figure 4-1 shows a typical application circuit.

4.1 Output Capacitor

A 1 µF (min) capacitor from $V_{OUT}$ to ground is required. The output capacitor should have an effective series resistance greater than 0.1Ω and less than 5Ω. A 1 µF capacitor should be connected from $V_{IN}$ to GND if there is more than 10 inches of wire between the regulator and the AC filter capacitor, or if a battery is used as the power source. Aluminum electrolytic or tantalum capacitor types can be used. (Since many aluminum electrolytic capacitors freeze at approximately -30°C, solid tantalums are recommended for applications operating below -25°C.) When operating from sources other than batteries, supply-noise rejection and transient response can be improved by increasing the value of the input and output capacitors and employing passive filtering techniques.
5.0 THERMAL CONSIDERATIONS

5.1 Thermal Shutdown

Integrated thermal protection circuitry shuts the regulator off when die temperature exceeds 160°C. The regulator remains off until the die temperature drops to approximately 150°C.

5.2 Power Dissipation

The amount of power the regulator dissipates is primarily a function of input and output voltage, and output current. The following equation is used to calculate worst-case actual power dissipation:

**EQUATION 5-1:**

\[ P_D = (V_{INMAX} - V_{OUTMIN})I_{LOADMAX} \]

Where:

- \( P_D \) = Worst-case actual power dissipation
- \( V_{INMAX} \) = Maximum voltage on \( V_I \)
- \( V_{OUTMIN} \) = Minimum regulator output voltage
- \( I_{LOADMAX} \) = Maximum output (load) current

The maximum allowable power dissipation (Equation 5-2) is a function of the maximum ambient temperature \( T_{AMAX} \), the maximum allowable die temperature \( T_{JMAX} \) and the thermal resistance from junction-to-air \( \theta_{JA} \).

**EQUATION 5-2:**

\[ P_{DMAX} = \frac{(T_{JMAX} - T_{AMAX})}{\theta_{JA}} \]

Where all terms are previously defined.

Table 5-1 and Table 5-2 show various values of \( \theta_{JA} \) for the TC1264 packages.

<tr>
<td>125 sq mm</td>
<td>2500 sq mm</td>
<td>2500 sq mm</td>
<td>35°C/W</td>
</tr>
</tbody>
</table>

* Tab of device attached to topside copper

Equation 5-1 can be used in conjunction with Equation 5-2 to ensure regulator thermal operation is within limits. For example:

- **Given:**
  - \( V_{INMAX} = 3.3V \pm 10\% \)
  - \( V_{OUTMIN} = 2.7V \pm 0.5\% \)
  - \( I_{LOADMAX} = 275 mA \)
  - \( T_{JMAX} = 125°C \)
  - \( T_{AMAX} = 95°C \)
  - \( \theta_{JA} = 59°C/W \) (SOT-223)

- **Find:**
  1. Actual power dissipation.
  2. Maximum allowable dissipation

**Actual power dissipation:**

\[ P_D = (V_{INMAX} - V_{OUTMIN})I_{LOADMAX} \]

\[ P_D = (3.3 \times 1.1) - (2.7 \times .995)275 \times 10^{-3} \]

\[ P_D = 260 mW \]

**Maximum allowable power dissipation:**

\[ P_{DMAX} = \frac{T_{JMAX} - T_{AMAX}}{\theta_{JA}} \]

\[ P_{DMAX} = \frac{(125 - 95)}{59} \]

\[ P_{DMAX} = 508 mW \]

In this example, the TC1264 dissipates a maximum of 260 mW; below the allowable limit of 508 mW. In a similar manner, Equation 5-1 and Equation 5-2 can be used to calculate maximum current and/or input voltage limits. For example, the maximum allowable \( V_{IN} \) is found by substituting the maximum allowable power dissipation of 508mW into Equation 5-1, from which \( V_{INMAX} = 4.6V \).
6.0 PACKAGING INFORMATION

- Drawing No. C04-158
APPENDIX A: REVISION HISTORY

Revision C (October 2006)

• **Section 1.0 “Electrical Characteristics”:**
  Changed dropout voltage voltage typical value for \( I_L = 500 \) mA from 700 to 1000 and maximum value from 1000 to 1200 for. Changed typical value for \( I_L = 800 \) mA from 890 to 1200

• **Section 6.0 “PackAging Information”:** Added package marking information and package outline drawings
  • Added disclaimer to package outline drawings.

Revision B (May 2002)

• Not Documented

Revision A (March 2002)

• Original Release of this Document.
PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

- e) TC1264-3.0VDB 3.0V LDO, SOT-223 pkg.
- f) TC1264-3.0VDBTR 3.0V LDO, SOT-223 pkg., Tape and Reel
- g) TC1264-3.3VDB 3.3V LDO, SOT-223 pkg.
- h) TC1264-3.3VDBTR 3.3V LDO, SOT-223 pkg., Tape and Reel
Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademark

The Microchip name and logo, the Microchip logo, Accuron, dsPIC, KEELoO, microID, MPLAB, PIC, PICmicro, PICSTART, PRO MATE, PowerSmart, rPIC, and SmartShunt are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AmpLab, FilterLab, Migratable Memory, MXDEV, MXLAB, SEEVAL, SmartSensor and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, CodeGuard, dsPICDEM, dsPICDEM.net, dsPICworks, ECAN, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, Linear Active Thermistor, Mindi, MiWi, MPASM, MPLIB, MPLINK, PICkit, PICDEM, PICDEM.net, PICLAB, PICtail, PowerCal, PowerInfo, PowerMate, PowerTool, REAL ICE, rLAB, rPICDEM, Select Mode, Smart Serial, SmartTel, Total Endurance, UNI/O, WiperLock and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.
