Features
- Highly Accurate: ±2%
- Low Power Consumption: 1.0µA, Typ.
- Detect Voltage Range: 1.6V to 6.0V and 7.7V
- Operating Voltage: 1.5V to 10.0V
- Output Configuration: Open-Drain or CMOS
- Space-Saving 5-Pin SOT-23A Package

Typical Applications
- Microprocessor Reset Circuits
- Battery Life Monitors and Recharge Voltage Monitors
- Memory Battery Backup Circuitry
- Power-On Reset Circuits
- Power Failure Detection
- Delay Circuitry

General Description
The TC53 is a low power voltage detector. Typical supply current consumption is only 1µA at an input voltage of 2V. The voltage detection threshold setting is factory-programmed and guaranteed to ±2% accuracy. Threshold settings are available over a range of 1.6V to 6.0V. The TC53 has both complementary (CMOS) and open drain (NMOS) output configuration options. TC53 is the ideal voltage detector for precision applications in which small size, low installed cost, high accuracy and low supply current consumption are critical.

Absolute Maximum Ratings*

- Input Voltage: +12V
- Output Current: 50mA
- Output Voltage: $V_{IN} + 0.3V$ to $V_{SS} - 0.3V$
- Power Dissipation: 5-Pin SOT-23A: 240mW
- Operating Temperature Range: -40°C to +85°C
- Storage Temperature Range: -40°C to +125°C

*Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Note 1: An additional resistor between the $V_{IN}$ pin and the supply voltage may alter the electrical characteristics due to the increasing values of $V_{DR}$.

Note 2: The power consumption during power-start to output being stable (release operation) is 2µA greater than it is after that period (completion of release operation) because of rush current in the delay circuit.

Note 3: $V_T$ is the factory-programmed voltage detection threshold.

## Sales and Support

### Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site (www.microchip.com)

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.
