Features

- Position Sensorless BLDC Drivers (No Hall Sensor Required)
- 180° Sinusoidal Drive, for High Efficiency and Low Acoustic Noise
- Support 2V to 14V Power Supplies
- Speed Control Through PAM and/or PWM
- Built-in Frequency Generator (FG Output Signal)
- Built-in Lock-up Protection and Automatic Recovery Circuit (External Capacitor not Necessary)
- Built-in Over Current Limitation and Short Circuit Protection
- Built-in Thermal Shutdown Protection
- Thermally Enhanced SOP-8 Package for MTD6501C and MTD6501G (Maximum Output Current – 800 mA);
- MSOP-10L Package for MTD6501D (Maximum Output Current – 500 mA)
- 20 kHz PWM Output Frequency for MTD6501C/D and 23 kHz for MTD6501G
- Boost Mode (Optional Back Electromotive Force (BEMF) Pre-amplification in MTD6501D)
- No External Tuning Required

The MTD6501C/D/G devices are formerly products of Advanced Silicon.

Description

The MTD6501C/D/G devices are 3-phase, full-wave drivers for brushless sensorless DC motors. They feature 180° sinusoidal drive, high torque output, and silent drive. Due to their adaptive features and wide power-supply range capabilities (2V to 14V), they are intended to cover a wide range of motor characteristics, while requiring no external tuning from the user. Speed control can be achieved through either power supply modulation or pulse-width modulation (using the PWM digital input pin).

Due to the compact packaging and minimum bill of materials (power transistors incorporated, no Hall sensor, no external tuning), they are best suited for low-cost fan applications requiring high efficiency and low acoustic noise, such as CPU cooling fans. Frequency generator output enables precision speed control in closed-loop applications. The MTD6501C/D/G drivers include a Lock-up Protection mode, which turns off the output current when the motor is under lock condition, and an automatic recovery that enables the fan to run when the lock condition is removed. Motor overcurrent limitation, short-circuit protection and thermal-shutdown protection are also included.

The MTD6501C and the MTD6501G are available in a compact thermally-enhanced SOP-8 package, while the MTD6501D is available in the MSOP-10L package.

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†

Power Supply Voltage (V_{CC\_MAX}) ........... -0.7 to +15.3V
Maximum OUT1, 2, 3 Output Voltage (V_{OUT\_MAX}) ......... -0.7 to +15.3V
FG Maximum Output Voltage (V_{FG\_MAX}) .......... -0.7 to +15.3V
Maximum Output Current (I_{OUT\_MAX}) .......... -0.7 to +4.0V
Max Junction Temperature (T_J) ................. +150°C

† Notice: Stresses above those listed under “Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

Note 1: Reference PCB, according to JEDEC standard EIA/JESD 51-9.
2: Derating applies for ambient temperatures outside the specified operating range (refer to Figure 1-1).
3: OUT1, OUT2, OUT3 (Continuous, 100% duty cycle).
4: MTD6501C and MTD6501G
5: MTD6501D

3.0 FUNCTIONAL DESCRIPTION

The MTD6501C/D/G devices generate a full-wave signal to drive a 3-phase sensorless BLDC motor. High efficiency and low-power consumption are achieved due to DMOS transistors and synchronous rectification drive type. The current carrying order of the output is as follows: OUT1 → OUT2 → OUT3.

3.1 Speed Control

The rotational speed of the motor can be controlled either through the PWM digital input signal or by acting directly on the power supply (VCC). When the PWM signal is “High” (or left open) the motor rotates at full speed. When the PWM signal is “Low”, the motor is stopped (and the IC outputs are set to high-impedance). By changing the PWM duty cycle, the speed can be adjusted. Notice that the PWM frequency has no special meaning for the motor speed and is asynchronous with the activation of the output transistors. Thus, the user has maximum freedom to choose the PWM system frequency within a wide range (from 20 Hz to 100 kHz), while the output transistor activation always occurs at a fixed rate, which is outside of the range of audible frequencies. The MTD6501C and MTD6501D typical output frequency is 20 kHz. The MTD6501G output frequency is 23 kHz.

3.2 Frequency Generator Function

The Frequency Generator output is a “Hall-sensor equivalent” digital output, giving information to an external controller about the speed and phase of the motor. The FG pin is an open drain output, connecting to a logical voltage level through an external pull-up resistor. When a lock (or out-of-sync) situation is detected by the driver, this output is set to high-impedance until the motor is restarted. Leave the pin open when not used. The FG signal can be used to compute the motor speed in rotations per minute (RPM). Typically, for a four pole BLDC fan, the speed in RPMs is 30 FG frequency (Hz).

3.3 Lockup Protection and Automatic Restart

If the motor is stopped (blocked) or if it loses synchronization with the driver, a lock-up protection circuit detects this situation and disables the driver (by setting its outputs to high-impedance) in order to prevent the motor coil from burnout. After a “waiting time” (TWAIT), the lock-up protection is released and normal operation resumes for a given time (TRUN). In case the motor is still blocked, a new period of waiting time is started. TWAIT and TRUN timings are fixed internally, so that no external capacitor is needed.

3.4 Overcurrent Protection and Short Circuit Detection

The motor peak current is limited by the driver to a fixed value (defined internally), thus limiting the maximum power dissipation in the coils. The detection of a short-circuit situation immediately sets the driver outputs to high-impedance, in order to avoid permanent damage to the IC.

3.5 Thermal Shutdown

The MTD6501C/D/G have a thermal protection function which detects when the die temperature exceeds TSD = +170°C. When this temperature is reached, the circuit enters Thermal Shutdown mode and the outputs OUT1, OUT2 and OUT3 are disabled (high-impedance), avoiding IC destruction and allowing the circuit to cool down. Once the junction temperature (TSD) has dropped below +145°C, the normal operation resumes (thermal detection circuit has +25°C hysteresis function).

3.6 Internal Voltage Regulator

VDD voltage is generated internally and is used to supply internal logical blocks. The VDD pin is used to connect an external decoupling capacitor (1 µF or higher). Notice that this pin is for IC internal use and is not designed to supply DC current to external blocks.
3.7 Boost Mode (MTD6501D)

The Boost mode is an optional BEMF pre-amplification by a factor of three. The intention of Boost mode is to compensate for motors with a low coupling coefficient (= BEMF coefficient), thus allowing it to cover an even wider range of motor characteristics. Notice that Boost mode impacts the mechanical performance of the motor altogether. In Boost mode, the speed of the motor will adjust faster to variations of the control (VCC or PWM) and/or of the load, including at start-up. However, when the BEMF is amplified too much, the mechanical performance (in terms of vibration and acoustic noise) may start degrading. Thus, Boost mode may be inappropriate for motors that already have a good coupling coefficient. The optimum choice between normal mode and Boost mode depends both on the application requirements and on the motor characteristics.

Refer to Table 3-1 for usage of Boost pin 9; leaving this pin floating results in the normal mode of operation, while tying this pin to GND activates Boost mode (active low feature, internal pull-up).

| TABLE 3-1: POSSIBLE MODES OF OPERATION BASED ON THE BOOST PIN CONNECTION |
|-----------------------------|-----------------|
| BOOST Pin                  | Mode of Operation |
| Floating                   | Normal           |
| Tied to GND                | Boost            |
4.0 PACKAGING INFORMATION

4.1 Package Marking Information

**Legend:**
- **XX...X**: Customer-specific information
- **Y**: Year code (last digit of calendar year)
- **YY**: Year code (last 2 digits of calendar year)
- **WW**: Week code (week of January 1 is week '01')
- **NNN**: Alphanumeric traceability code
- **Pb-free JEDEC designator for Matte Tin (Sn)**
- *****: This package is Pb-free. The Pb-free JEDEC designator can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

APPENDIX A: REVISION HISTORY

Revision B (May 2012)

The following is the list of modifications:

1. Added the MTD6501G device to the family and related information throughout the document.
2. Updated the Temperature Specifications table.
3. Sorted the information in Table 2-1.
4. Corrected Frequency Generator output to open drain in Section 3.2 “Frequency Generator Function”.
5. Renamed Section 4.0 “Packaging Information”. Added Section 4.1 “Package Marking Information”.
7. Other minor typographical corrections.

Revision A (September 2010)

• Original data sheet for the MTD6501C/D/G family of devices.
PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

Package C1* = 8-Lead Plastic Small Outline – Thermally Enhanced Package (SOP)

* These devices are formerly products of Advanced Silicon

Examples:

a) MTD6501C-HC1 Tube, 8LD SOP Package
b) MTD6501C-LC1 Tape and Reel, 8LD SOP Package
c) MTD6501D-HC1 Tube, 10LD MSOP Package
d) MTD6501D-LC1 Tape and Reel, 10LD MSOP Package
e) MTD6501G-HC1 Tube, 8LD SOP Package
f) MTD6501G-LC1 Tape and Reel, 8LD SOP Package
Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

The Microchip name and logo, the Microchip logo, dsPIC, KEELoQ, KEELoQ logo, MPLAB, PIC, PICmicro, PICSTART, PIC^32^ logo, rPIC and Uni/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, Hampshire, HI-TECH C, Linear Active Thermistor, MXDEV, MXLAB, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, chipKIT, chipKIT logo, CodeGuard, dsPICDEM, dsPICDEM.net, dsPICworks, dsSPEAK, ECAN, ECONOMONITOR, FanSense, HI-TIDE, In-Circuit Serial Programming, ICSP, Mindi, MiWi, MPASM, MPLAB Certified logo, MPLIB, MPLINK, mTouch, Omniscient Code Generation, PICC, PICC-18, PICDEM, PICDEM.net, PICkit, PICtail, REAL ICE, rflAB, Select Mode, Total Endurance, TSHARC, UniWinDriver, WiperLock and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.
