Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV

ISO/TS 16949:2002

Microchip received ISO/TS-16949:2002 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona, Gresham, Oregon and Mountain View, California. The Company’s quality system processes and procedures are for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip’s quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXA”, where “XXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE on-line help. Select the Help menu, and then Topics to open a list of available on-line help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the MCP1630 NiMH Battery Charger Demo Board. Items discussed in this chapter include:

• Document Layout
• Conventions Used in this Guide
• Recommended Reading
• The Microchip Web Site
• Customer Support
• Document Revision History

DOCUMENT LAYOUT

This document describes how to use the MCP1630 NiMH Battery Charger Demo Board. The manual layout is as follows:

• Chapter 1. “Product Overview” – Important information about the MCP1630 NiMH Battery Charger Demo Board.
• Chapter 2. “Installation and Operation” – This chapter includes instructions on how to get started, as well as a description of the MCP1630 NiMH Battery Charger Demo Board.
• Appendix A. “Schematic and Layouts” – Shows the schematic and layout diagrams for the MCP1630 NiMH Battery Charger Demo Board.
• Appendix B. “Bill Of Materials (BOM)” – Lists the parts used to build the MCP1630 NiMH Battery Charger Demo Board.
• Appendix C. “Evaluation Board Firmware” – Provides information about the application firmware and where the source code can be found.
CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

**RECOMMENDED READING**

This user’s guide describes how to use the MCP1630 NiMH Battery Charger Demo Board. The following Microchip documents are available and recommended as supplemental reference resources.

**MCP1630 Data Sheet, “High-Speed, Microcontroller-Adaptable, Pulse Width Modulator” (DS21896)**

This data sheet provides detailed information regarding the MCP1630 product family.
THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://support.microchip.com

DOCUMENT REVISION HISTORY

**Revision B (March 2006)**

- Updated Bill of Materials (BOM) to show RoHS-compliant part numbers.

**Revision A (September 2004)**

- Initial Release of this Document.
Chapter 1. Product Overview

1.1 INTRODUCTION

The MCP1630 NiMH Battery Charger Demo Board is used to evaluate the Microchip MCP1630 used in a SEPIC power-converter application. The evaluation board is a complete stand-alone 4-cell NiMH battery charger that utilizes an 8V to 15V input capable of charging 4 NiMH batteries in series.

FIGURE 1-1: NiMH Charger Block Diagram.
1.2 WHAT IS THE MCP1630 NiMH BATTERY CHARGER DEMO BOARD?

The MCP1630 NiMH Battery Charger Demo Board is a complete stand-alone constant current battery charger and simple fuel gauge for four NiMH series batteries. This board utilizes Microchip’s MCP1630 (high-speed PIC® MCU PWM MSOP-8), MCP1700T (LDO Regulator SOT-23), MCP6042T (Op Amp MSOP-8), PIC16LF818 (MCU Flash SSOP-20), TC54 (Voltage Detector SOT-23A) and TC1047A (Temp-Volt Converter SOT-23B). The input voltage range for the demo board is 8V to 15V. The output is capable of charging four NiMH batteries with up to 1.6V per cell at a fast charge rate of 500 mA constant current.

Input terminals are provided to apply an input voltage to the charger. Output terminals are also provided as a way to connect the external NiMH batteries or a simulated battery load.

1.3 WHAT THE MCP1630 NiMH BATTERY CHARGER DEMO BOARD KIT INCLUDES

This MCP1630 NiMH Battery Charger Demo Board Kit includes:

• The MCP1630 NiMH Battery Charger Demo Board
• MCP1630 NiMH Battery Charger Demo Board User’s Guide (DS51505)
• MCP1630 Data Sheet, “High-Speed, Microcontroller-Adaptable, Pulse Width Modulator” (DS21896)
Chapter 2. Installation and Operation

2.1 INTRODUCTION

The MCP1630 NiMH Battery Charger Demo Board demonstrates Microchip’s MCP1630 high-speed Pulse Width Modulator (PWM) used in a smart battery charger application. The MCP1630 is a high-speed, microcontroller-adaptable PWM that, when used in conjunction with a microcontroller, will control the power system duty cycle to provide output voltage or current regulation. The PIC16LF818 microcontroller can be used to regulate output voltage or current, switching frequency and maximum duty cycle. The MCP1630 generates pulse-by-pulse duty cycle, provides fast overcurrent protection and utilizes variable external inputs. External signals include the input oscillator and the reference voltage. The power train signals include the current sense and the feedback voltage; the output signal is a square-wave pulse. The power train used for the MCP1630 NiMH Battery Charger Demo Board is a Single-Ended Primary Inductive Converter (SEPIC).

2.2 FEATURES

The MCP1630 NiMH Battery Charger Demo Board has the following features:

• Programmed charge currents:
  - Fast Charge = 500 mA
  - Trickle Charge = 50 mA
  - Top-Off Charge = 25 mA
• Overvoltage protection (battery removed)
• Overcharge protection to prevent the battery from becoming dangerously overcharged
• Overdischarge protection to prevent the battery from being damaged
• Overcurrent protection in the event of a shorted battery
• Battery reversal protection
• Input short circuit protection
• Fast charge termination if the battery or ambient temperature is too high
• Soft-start capability by holding the reference voltage low during power-up
• The MCP1630 NiMH Battery Charger Demo Board terminates charge by detecting a predefined change in voltage with respect to time, a specified temperature or specified elapsed time
• A simple fuel gauge that has a dual MCP6042 amplifier, a 1-channel sense voltage and a 1-channel sense current
• The MCP1630 NiMH Battery Charger Demo Board has the flexibility to optimize the charging algorithm for new battery technology and add proprietary features by coding the microcontroller
• Ability to adapt to environmental effects, such as ambient temperature
• Uses a very low standby current of 29 μA
2.3 GETTING STARTED

The MCP1630 NiMH Battery Charger Demo Board is fully assembled and tested for charging four 1,000 mA/hour NiMH batteries in series from 3.2V to 6V in accordance with the recommended charge profile for NiMH batteries. This board requires the use of an external input voltage source (+8V to +15V) and external load (battery or simulated battery load). It is recommended that four NiMH cells connected in series to act as a load or the recommended simulated load be used.

2.3.1 Power Input and Output Connections

2.3.1.1 POWERING THE MCP1630 NiMH BATTERY CHARGER DEMO BOARD.

1. Apply the input voltage to the surface mount test points provided. The input voltage source should be limited to the 0V to +15V range. For normal operation, the input voltage should be between +8V and +15V. However, the input voltage must not exceed +15V maximum. The source current necessary to regulate the output voltage to 6.4V at 500 mA should be a minimum of approximately 800 mA.

2. Connect the positive side of the input source (+) to test point TP2. Connect the negative (or return side) (–) of the input source to the GND test point TP3. TP2 is located just above TP3 in the upper-left corner of the board.

2.3.1.2 APPLYING THE LOAD TO THE MCP1630 NiMH BATTERY CHARGER DEMO BOARD.

1. To apply a load to the MCP1630 NiMH Battery Charger Demo Board, the positive side of the load (+) should be connected to test point TP1. The negative side of the load (–) should be connected to test point TP4. Care should be taken when using electronic or ground-referenced loads, and never connect TP4 to ground. The battery current sense is referenced in the return leg, so connecting TP4 to ground will short out the current sense. The typical charge current is 50 mA while the battery is in the Trickle Charge mode or the battery voltage is below 0.8V/cell. The current is typically 500 mA when the battery is in the Fast Charge mode and typically 25 mA when the battery is in the Top-off Charge mode. The charge current is automatically regulated by the MCP1630.

2. The code will prevent the board from entering the 500 mA Fast Charge mode if the battery terminal voltage is less than 3.2V (0.8V / Cell). During power up, the board will always trickle charge first, so using a purely resistive load will not work for trickle and fast charge currents. The best way to evaluate the charger is to use four series NiMH batteries or the recommended simulated battery load.

![Simulated Battery Load Diagram](image-url)
2.3.1.3 STATUS LEDS

The MCP1630 NiMH Battery Charger Demo Board has two LEDs. D1 is a red LED that is used to indicate when input power is available. When the +12V input is connected, D1 will be illuminated. The other LED (D9) has two LEDs built into a SOT-23 package. These can be off, red, green or both on (amber). To conserve energy, D9 is never illuminated when there is no input power. If both LEDs are off, that is an indication there is no power supplied to the board input.

Under normal power-up conditions, the charger will begin with a 50 mA trickle charge. The microcontroller will then check the status of the batteries to ensure that they are present, their temperature is within range and the series voltage is within specified charging limits. For visual LED charge status, a dual-color SOT-23 LED is used (D9).

- **D9 Status Indication Normal Charge Modes:**

<table>
<thead>

</tr>
<tr>
<td>Overcurrent</td>
<td>ON Blinking</td>
<td>OFF</td>
</tr>
</tbody>
</table>

With no input connected and 4 NiMH batteries used as a load, the MCP1630 NiMH Battery Charger Demo Board will consume approximately 29 μA from the battery.

A temperature sensor is provided for charge termination. The sensor (U2) is located on the back of the printed circuit board. To utilize this feature, batteries should be in physical contact with the temperature sensor.

**Programming:**

- J1 can be used as a Flash programming port to modify the code for prototype applications. The pinout of J1 matches the required pinout for the MPLAB® ICD 2 programmer.
A.1 INTRODUCTION

This appendix contains the schematics and layouts for the MCP1630 NiMH Battery Charger Demo Board. The diagrams included in this appendix include:

## WORLDWIDE SALES AND SERVICE

### AMERICAS

**Corporate Office**
2355 West Chandler Blvd.
Chandler, AZ 85224-6199
Tel: 480-792-7200
Fax: 480-792-7277
Technical Support: http://support.microchip.com
Web Address: www.microchip.com

**Atlanta**
Alpharetta, GA
Tel: 770-640-0034
Fax: 770-640-0307

**Boston**
Westborough, MA
Tel: 774-760-0087
Fax: 774-760-0088

**Chicago**
Itasca, IL
Tel: 630-285-0071
Fax: 630-285-0075

**Dallas**
Addison, TX
Tel: 972-818-7423
Fax: 972-818-2924

**Detroit**
Farmington Hills, MI
Tel: 248-538-2250
Fax: 248-538-2260

**Kokomo**
Kokomo, IN
Tel: 765-864-8360
Fax: 765-864-8387

**Los Angeles**
Mission Viejo, CA
Tel: 949-462-9523
Fax: 949-462-9608

**San Jose**
Mountain View, CA
Tel: 650-215-1444
Fax: 650-961-0286

**Toronto**
Mississauga, Ontario, Canada
Tel: 905-673-0699
Fax: 905-673-6509
