Evaluation Board
User’s Guide
Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and
documentation are constantly evolving to meet customer needs, so some actual dialogs
and/or tool descriptions may differ from those in this document. Please refer to our web site
(www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each
page, in front of the page number. The numbering convention for the DS number is
“DSXXXXXA”, where “XXXXX” is the document number and “A” is the revision level of the
document.

For the most up-to-date information on development tools, see the MPLAB® IDE on-line help.
Select the Help menu, and then Topics to open a list of available on-line help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the
MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board. Items discussed
in this chapter include:
• Document Layout
• Conventions Used in this Guide
• Recommended Reading
• The Microchip Web Site
• Customer Support
• Document Revision History

DOCUMENT LAYOUT

This document describes how to use the MCP73113 OVP Single-Cell Li-Ion Battery
Charger Evaluation Board. The manual layout is as follows:
• Chapter 1. “Product Overview” – Important information about the MCP73113
OVP Single-Cell Li-Ion Battery Charger Evaluation Board.
• Chapter 2. “Installation and Operation” – Includes instructions on how to get
started with this user’s guide and a description of the user’s guide.
• Appendix A. “Schematic and Layouts” – Shows the schematic and layout
diagrams for the MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation
Board.
• Appendix B. “Bill Of Materials (BOM)” – Lists the parts used to build the
MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board.
CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

RECOMMENDED READING

This user's guide describes how to use MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board. The following Microchip document is recommended as supplemental reference resources.

MCP73113 Data Sheet, “Single-Cell Li-Ion / Li-Polymer Battery Charge Management Controller with Input Overvoltage Protection”, DS22183

This data sheet provides detailed information regarding the MCP73113 product family.
THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

• **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
• **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
• **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

• Distributor or Representative
• Local Sales Office
• Field Application Engineer (FAE)
• Technical Support
• Development Systems Information Line

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://support.microchip.com.

DOCUMENT REVISION HISTORY

Revision A (July 2009)

• Initial Release of this Document.
Chapter 1. Product Overview

1.1 INTRODUCTION

The MCP73113 product family is highly integrated linear charge management controllers for single-cell Li-Ion and Li-Polymer batteries. The MCP73113 product family operates with minimum external components, which is ideal for use in space-limited and cost-effective applications. The input over voltage protection and battery short circuit protection offer designers a secondary protection in addition to the Li-Ion battery protection circuit.

This chapter provides an overview of the MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board and covers the following topics:

- “What is the MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board?”
- “What the MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board Kit includes:”

FIGURE 1-1: MCP73113 Typical Application.
1.2 WHAT IS THE MCP73113 OVP SINGLE-CELL LI-ION BATTERY CHARGER EVALUATION BOARD?

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board demonstrates the features of Microchip’s MCP73113 “Single-Cell Li-Ion / Li-Polymer Battery Charge Management Controller with Input Overvoltage Protection”.

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board is designed with two charging current. The default value is 500 mA and when PROG via is tied to ground, the two parallel resistors output 1000 mA charging current to a Li-Ion battery. One blue LED status output allows the user to learn if the MCP73113 is in charging state or not.

Note: Please refer to Table 2-1 for Charge Status Outputs and Table 2-2 for Charge Current Setups.

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board comes with an installed MCP73113 device in 3mm x 3mm DFN package. The factory preset battery regulation voltage is 4.20V with precondition, termination and auto recharge features.

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board is designed to observe the performance and features on the circuits via multiple test points. Circuits can also be implemented into suitable applications without additional work.

1.3 WHAT THE MCP73113 OVP SINGLE-CELL LI-ION BATTERY CHARGER EVALUATION BOARD KIT INCLUDES:

This MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board kit includes:

- MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board, 102-00260
- Important Information Sheet
Chapter 2. Installation and Operation

2.1 INTRODUCTION

The MCP73113 is a highly integrated Li-Ion battery charge management controller for use in space-limited and cost-sensitive applications. The MCP73113 provides specific charge algorithms for Li-Ion / Li-Polymer batteries to achieve optimal capacity and safety in the shortest charging time possible. Along with its small physical size, the low number of external components makes the MCP73113 ideally suitable for portable applications.

The absolute maximum voltage, up to 18V, allows the use of MCP73113 in harsh environments, such as low cost wall wart.

The MCP73113 employs a constant current / constant voltage charge algorithm. The various charging voltage regulations provide design engineers flexibility to use in different applications. The fast charge, constant current value is set with one external resistor from 130 mA to 1100 mA. The MCP73113 limits the charge current based on die temperature during high power or high ambient conditions. This thermal regulation optimizes the charge cycle time while maintaining device reliability.

The PROG pin of the MCP73113 also serves as enable pin. When high impedance is applied, the MCP73113 will be in standby mode.

Typical applications for the reference design are Smart Phones, PDA, Portable Media Players, MP3 Players, Digital Cameras, Handheld Medical devices, Bluetooth headsets and Portable Communicators.

2.2 FEATURES

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board has the following features:

- 6.5V Input Over Voltage Protection
- 10% Preconditioning of deeply depleted cells
- 32-Minute Preconditioning Timer
- 6-Hour Safety Timer
- 10% Automatic Charge Termination
- 500 mA and 1000 mA Preset Fast Charge Current
- Automatic Recharge
- Thermal Regulation
- One Blue LED indicates charge status
- Small DFN packages with Exposed Pad as additional heat sink
2.3 GETTING STARTED

The MCP73113 OVP Single-Cell Li-Ion Battery Charger Evaluation Board is fully assembled and tested for charging a single-cell Li-Ion or Li-Polymer battery.

2.3.1 Power Input and Output Connection

2.3.1.1 POWERING THE MCP73113 OVP SINGLE-CELL LI-ION BATTERY CHARGER EVALUATION BOARD

1. Connect the positive battery terminal to \( V_{BAT+} \) and negative battery terminal to \( V_{BAT-} \).
2. Connect the 5V DC power supply Negative Terminal to \( V_{SS} \).
3. Connect the 5V DC power supply Positive Terminal to \( V_{DD} \).
4. It should initiate the battery charging cycle when the power source is present and \( V_{BAT} \) is below recharge threshold. For example, when \( V_{REG} \) is 4.2V, \( V_{BAT} \) needs to be lower than 3.99V to initiate the charge cycle.

5. The charging status table is available in Table 2-2.
6. The fast charge current is preset at 500 mA and can be increased to 1A by connecting PROG via to ground.

Note: The Li-Ion battery pack can be replaced with test circuit or electronic load that can sink current with DC power supply. Refer to Figure 2-3.

Note: Fast Charge Current can be programmed with various resistors based on Figure 2-2 and Table 2-1.
