Features

- Qualified for Bluetooth SIG v4.2 specifications
- Certified for FCC, IC, MIC, KCC, NCC, and SRRC radio regulations
- Certified by European R&TTE Directive Assessed Radio module
- Compliant to RoHS
- Supports UART interface
- Supports transparent UART data service of BLE
- BM70 module supports 3-channel pulse-width modulation (PWM) and BM71 module supports 1-channel PWM
- Supports Precision Temperature Sensor (PTS) for ambient temperature detection
- Supports 12-bit ADC (ENOB=10 or 8 bits) for battery and voltage detection
- 8-channel ADC for BM70 module and 5-channel ADC for BM71 module are provided
- Featured with 18 general purpose I/O (GPIO) pins for the BM70 module and 9 GPIO pins for the BM71 module
- Featured with integrated 32 MHz crystal
- Small and compact surface mount module
- Castellated surface mount pads for easy and reliable host PCB mounting

RF Features

- ISM band 2.402 GHz to 2.480 GHz operation
- Channels: 0 to 39
- Receive Sensitivity: typical -90 dBm (LE)
- Transmit Power: 0 dBm (typical)
- Received Signal Strength Indication (RSSI) monitor with 1 dB resolution

MAC/Baseband/Higher Layer Features

- Secure AES128 encryption
- Bluetooth 4.2: GAP, GATT, SMP, L2CAP and integrated public profile
- Create custom GATT services, refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for details on creating GATT services
- I/O capability for Bluetooth 4.0/4.2 authentication
- Configurable role as peripheral/central, client/server

Antenna

- Integrated chip antenna (BM7xBLES1FC2)
- Refer to Section 4.0 “Antenna”, Table 4-1, and Table 4-2 for antenna performance specifications
- External antenna connection through RF pad (BM7xBLE01FC2)

Power Management

- Two low-power modes supported, wake-up through GPIO or internal timer
- Average current: Tx=3.3 mA and Rx=3.2 mA with buck at 3.0V VBAT input and 18.75 ms connection interval, when transmitting full data packets to achieve a data rate of approximately 8.6 kbps
BM70/71

Operating Conditions

• Operating voltage range: 1.9V to 3.6V
• Operating temperature: -40°C to +85°C

Applications

• Internet of Things (IoT)
• Secure payment
• Wearable devices
• Home and security
• Health and fitness
• Beacons
• Industrial and data logger

General Description

The BM70/71 module offers BLE solution for embedded applications. It conforms to the Bluetooth v4.2 specifications to enhance the throughput and security for the IoT applications. It also supports Beacon technology to enhance user experience for the IoT applications and enables users to control the cloud and receive data without opening the application through a smartphone.

The BM70/71 module has Bluetooth stack integrated and is available in different form factors to optimize the space, cost, and RF performance. The power-optimized design minimizes the current consumption and extends battery life for portable and wearable applications.

TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at docerrors@microchip.com or fax the Reader Response Form in the back of this data sheet to (480) 792-4150. We welcome your feedback.

Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

http://www.microchip.com

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000000A is version A of document DS30000000).

Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:
• Microchip’s Worldwide Web site; http://www.microchip.com
• Your local Microchip sales office (see last page)

When contacting a sales office, please specify which device, revision of silicon and data sheet (include literature number) you are using.

Customer Notification System

Register on our web site at www.microchip.com to receive the most current information on all of our products.
1.0 DEVICE OVERVIEW

The BM70/71 module is built around Microchip Technology IS1870/71 BLE Integrated Circuit (IC). The IS1870/71 IC includes an on-board Bluetooth stack, a power management subsystem, a 2.4 GHz transceiver, and a RF power amplifier. The user can embed Bluetooth functionality into any product using the BM70/71 module.

The BM70/71 module enables the following features:
- Simple integration and programming
- Reduced development time
- Superior wireless module with low-cost system
- Interoperability with Apple® iOS and Android™ OS
- Wide range of applications

The BM70/71 module can independently maintain a low-power wireless connection. Low-power and flexible power management features maximize the lifetime of the BM70/71 module in battery operated devices. A wide operating temperature range enable its applications in indoor and outdoor environments.

The BM70/71 module is a small, compact, and surface-mounted module with castellated pads for easy and reliable host PCB mounting. The relatively small form factor of the module is targeted for applications, such as wearable sports, fitness devices and so on.

1.1 Interface Description

Figure 1-1 and Figure 1-2 illustrate an example of the BM70/71 module-based system.

2.0 APPLICATION INFORMATION

2.1 Reference Schematics

Figure 2-1 through Figure 2-8 illustrate the BM70/71 module reference schematics for the various Stock Keeping Units (SKUs). The GPIOs are configurable, and the connection depends on the user’s application circuit.

The power supply range is 1.9V to 3.6V. If the battery is used, the battery reverse protection circuit is recommended. The VDD_IO voltage is same as power supply. If the LED is used, ensure that the voltage is more than 3V to drive the LED. A 1.8V Reset IC is added as an optional circuit to prevent the Flash data crash, when VBAT power is unstable. It is recommended to implement the RF antenna matching circuit to fine tune the antenna impedance matching, refer Figure 2-3 and Figure 2-5 for details.

2.2 External Configuration and Programming

The BM70/71 module can be configured and programmed using an external configuration and programming tool. Figure 2-9 illustrates the minimum signals required for configuring and programming the module using host PCB.

Configuration and programming modes can be configured using the P2_0 pin. Refer to 3.4 “System Configuration” for details.

FIGURE 2-9: EXTERNAL CONFIGURATION AND PROGRAMMING
2.3 Host MCU Interface

2.3.1 HOST MCU INTERFACE OVER UART

Figure 2-10 and Figure 2-11 illustrate the interfacing between the BM70/71 and host MCU using UART. UART uses Host Control Interface (HCI) to share the communication among the Host MCU and BM70/71 module. The interface also illustrates the power scheme using a 3.3V Low-Drop Out (LDO) regulator that supply 3.3V to the BM70/71 (BAT_IN) and MCU VDD. This power scheme ensures that the BM70/71 module and MCU I/O voltages are compatible.

**FIGURE 2-10: BM70 MODULE TO MCU INTERFACE**

- **Note 1:** Ensure that VBAT (=I/O Voltage) and MCU VDD voltages are compatible.
- **Note 2:** Control and indication ports are configurable.
FIGURE 2-11: BM71 MODULE TO MCU INTERFACE

Note 1: Ensure that VBAT (=I/O Voltage) and MCU VDD voltages are compatible.
2: Control and indication ports are configurable.
3: 10 μF (X5R) and 330 Ohm resistor are required for the BM71 module.
4: BK_IN connect to VBAT for BM71BLE01FC2.
2.3.2 UART READY AFTER EXTERNAL RESET

In MCU applications, the time between Reset and the BM70/71 module UART port ready for Test mode and Application mode, after an external Reset (RST_N) must be notified. Figure 2-12 illustrates the timing diagram of the BM70/71 module UART port ready for Test mode and Application mode after reset.

FIGURE 2-12: TIMING DIAGRAM OF BM70/71 MODULE UART READY FOR TEST MODE AFTER RESET
2.3.3 UART READY AFTER POWER-ON RESET

Figure 2-13 illustrates the timing diagram of the BM70 module UART port ready for Test mode and Application mode after Power-on Reset (POR).

In Application mode, when the BM70/71 module is ready to communicate with the host MCU after reset, the BM70/71 module may have internal status indicated by the status pins, or by a status report UART command. This status pin or status report UART command is sent to inform the MCU that the BM70/71 module is ready for communication.

FIGURE 2-13: TIMING DIAGRAM OF BM70 MODULE UART READY FOR TEST MODE AFTER POWER-ON
2.4 Typical Hosted Configuration

Figure 2-14 illustrates the typical hosted configuration for the BM71 module. It also illustrates an application using a coin cell battery at VBAT input. For the BM71 module, a 10 μF capacitor (X5R/X7R) is applied to the BAT_IN pin. Only on the BM71 module, the BK_IN pin of the module must be connected to the BAT_IN pin.

Note 1: Hardware functions can include ADC and PWM. Refer to "BM70/71 Bluetooth® Low Energy Module User’s Guide" (DS50002542) for a full description of all possible configurable behavior and hardware.
2.5 Power-Drop Protection

To prevent the BM70/71 module from disruptions, when the voltage drops to less than 1.9V, an “Open Drain” Reset chip with a delay time of ≤ 10 ms that triggers Reset at 1.8V output voltage is recommended. Figure 2-15 illustrates the Reset circuit block diagram.

FIGURE 2-15: RESET CIRCUIT BLOCK DIAGRAM
3.0 MODULE CONFIGURATION

The BM70/71 module features and services can be configured to fit a wide range of application requirements. Refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for details of all device behavior along with information on how to configure the IS8170/71 IC on the BM70/71 module. Refer to 3.1“UART Interface” through 3.4“System Configuration” that describe default behavior of the BM70/71 module, which can be easily changed.

3.1 UART Interface

The BM70/71 module UART pins, TXD and RXD, are connected to the UART pins of the host MCU. By default, the UART characteristics are set to a baud rate of 115200, with 8-bit data, 1 stop bit, no parity, and no hardware flow control. These characteristics are configurable, refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for the full description.

3.2 Control and Indication I/O Pins

The BM70/71 module I/O pins are configurable as either control or indication signal. The control signals are input to the BM70/71 module and the indication signals are output from the BM70/71 module. For different BM70/71 module application requirements, the I/O pin assignment is configurable and can fit a wide range of application requirements. For additional information related to I/O pin assignment, refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542).

**Note 1:** These signals are part of the remappable hardware functionality and can be input/output on different GPIO pins of the module. Refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for details.
3.3 Reset (RST_N)

The Reset input pin (RST_N) is used to reset the BM70/71 module with an active-low pulse with a minimum pulse width of 63 ns.

3.4 System Configuration

Table 3-3 provides the system configuration settings of the P2_0 pin that places the BM70/71 module into various operational modes. The P2_0 pin has an internal pull up.

4.2 Antenna Placement

For a Bluetooth wireless product, the antenna placement affects the whole system performance. The antenna requires free space to radiate the RF signals and it cannot be surrounded by the ground plane.

Figure 4-3 illustrates a typical example of the good and poor antenna placement of the BM70BLES1FC2 module on the main application board with the ground plane.

**FIGURE 4-3: BM70BLES1FC2 ANTENNA PLACEMENT EXAMPLES**
Figure 4-4 illustrates a typical example of the good and poor antenna placement of the BM71BLES1FC2 module on the main application board with the ground plane.

4.4 **Host PCB Mounting Suggestion**

4.4.1 **BM70BLES1FC2 HOST PCB MOUNTING**

Figure 4-5 illustrates the host PCB mounting suggestions for the BM70BLES1FC2 module, and it shows the minimum ground plane area to the left and right of the module for best antenna performance.

The area under the antenna must not contain any top, inner, or bottom copper layer, while designing the host PCB. A low-impedance ground plane ensures the best radio performance (best range, low noise). The ground plane can be extended beyond the minimum recommended as required for the host PCB EMC noise reduction. For best range performance, keep all external metal away by minimum 30 mm from the ceramic chip antenna.

**FIGURE 4-5: BM70BLES1FC2 HOST PCB MOUNTING SUGGESTION**
4.4.2 BM70BLE01FC2 HOST PCB MOUNTING

Figure 4-6 illustrates the mounting suggestions for the BM70BLE01FC2 module and it also shows a connection to UFL connector. A low-impedance ground plane will ensure the best radio performance (best range, low noise).

The pin 30 (BT_RF) is connected to an external antenna connector, a PCB trace antenna, or a component (ceramic chip) antenna through a host PCB 50 Ohm micro-strip trace. The micro-strip trace can be extended to include passive parts for antenna attenuation padding, impedance matching, or to provide test points. It is recommended that the micro-strip trace must be as short as possible for minimum loss and best impedance matching. If the micro-strip trace is longer, it must be a 50 Ohm controlled impedance.

FIGURE 4-6: BM70BLE01FC2 HOST PCB MOUNTING SUGGESTIONS

Top Copper Layer

Bottom Copper Layer
4.4.3 BM71BLES1FC2 HOST PCB MOUNTING

Figure 4-7 illustrates the mounting suggestions for the BM71BLES1FC2 module. It also shows the area around the antenna, required for the best antenna performance.

The area under the antenna must not contain any top, inner, or bottom copper layer while designing the host PCB. A low-impedance ground plane ensures the best radio performance (best range, low noise). The ground plane can be extended beyond the minimum recommended as required for the host PCB EMC noise reduction. For best range performance, keep all external metal away by minimum 30 mm from the ceramic chip antenna.

FIGURE 4-7: BM71BLES1FC2 HOST MOUNTING SUGGESTION
4.4.4 BM71BLE01FC2 HOST PCB MOUNTING

Figure 4-8 illustrates the mounting suggestions for the BM71BLE01FC2 module. It also shows a connection to the UFL connector. A low-impedance ground plane ensures the best radio performance (best range, low noise).

The pin 1 (BT_RF) is connected to an external antenna connector, a PCB trace antenna, or a component (ceramic chip) antenna through a host PCB 50 Ohm micro-strip trace. The micro-strip trace can be extended to include passive parts for antenna attenuation padding, impedance matching, or to provide test points. It is recommended that the micro-strip trace must be as short as possible for minimum loss and best impedance matching. If the micro-strip trace is longer, it must be a 50 Ohm controlled impedance.

FIGURE 4-8: BM71BLE01FC2 HOST PCB MOUNTING SUGGESTION
5.0 ELECTRICAL CHARACTERISTICS

This section provides an overview of the BM70/71 module electrical characteristics. Additional information will be provided in future revisions of this document as it become available.

Absolute Maximum Ratings

Ambient temperature under bias for modules parts ending with 0002......................................................-20°C to +70°C
Ambient temperature under bias for modules parts ending with 0B0x......................................................-40°C to +85°C
Storage temperature .............................................................................................................................. -40°C to +125°C
Voltage on VDD with respect to VSS ......................................................................................................... -0.3V to +3.6V
Voltage of any digital pin .........................................................................................................................-0.3V to VDD + 0.3 ≤ 3.9
Maximum output current sink by any I/O pin..........................................................................................................12 mA
Maximum output current sourced by any I/O pin....................................................................................................12 mA

Note: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions, above those indicated in the operation listings of this specification, is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.
Table 5-1 provides the recommended operating conditions of the BM70/71 module.

5.1 Current Consumption Details

5.1.1 Tx/Rx CURRENT CONSUMPTION DETAILS

Figure 5-1 illustrates the Tx/Rx peak current consumption of 12 mA during an advertising event. However, the average current consumption is only around 230 μA, while advertising at an interval of approximately 100 ms, see Figure 5-2. This is due to the "Reduced Current Consumption" low-power mode being enabled (configuration parameter - UART_RX_IND). Reducing the current draw to approximately 60 μA, while not actively transmitting the advertisings packets, refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for more details.

The overall average current consumption is measured with a 3.3V VBAT input, and is affected by the way the IS1870/71 IC on the BM70/71 module has been configured to operate. A low average current value can be achieved by choosing the minimum settings for the advertising interval and connection interval, which meet the data throughput requirements of the intended application. The lower or less frequent the interval time periods, the lower the overall average current to be drawn.

FIGURE 5-1: TX/RX PEAK CURRENT CONSUMPTION OF AN ADVERTISING EVENT
Figure 5-2 illustrates the oscilloscope screen, captured when the auto operation and Low-Power mode is active on the BM70/71 module. Refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542) for more details on the auto operation.

FIGURE 5-2: TX/RX AVERAGE CURRENT CONSUMPTION WHILE BM70/71 MODULE IS ADVERTISING

For additional information on the current consumption measurements, test conditions, and test environment setup, refer to the “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542). This user guide covers the detailed information about the behavior of the default internal logic of the IS1870/71 IC on the BM70/71 module.
Table 5-3 provides the average current consumption measurements for the BM70/71 module in Application mode.

<td>80 µA</td>
</tr>
</tbody>
</table>

**Note 1:** These measurements are done at an operating temperature of +25°C at 3.3V and are characterized across a sample of BM70/71 modules.

**2:** These measurements are taken with version 1.06 firmware, loaded into the module with “Reduced Current Consumption” low power mode enabled. For more details on low-power modes and current consumption configuration, refer to “BM70/71 Bluetooth® Low Energy Module User’s Guide” (DS50002542).

**3:** The advertising packet data payload is approximately 15 bytes in length.

**4:** The amount of data being transmitted between two peer devices can affect the average current measured. The average current measurements are done with only the necessary Bluetooth packets being exchanged to keep the connection active at the stated interval.

7.0 SOLDERING RECOMMENDATIONS

The BM70/71 module is assembled using a standard lead-free, reflow profile, IPC/JEDEC J-STD-020. The BM70/71 module can be soldered to the host PCB by using the standard lead or lead-free solder reflow profiles.

To avoid any damage to the BM70/71 module, follow these recommendations:

- Refer to the “AN233 Solder Reflow Recommendation” (DS00233) document for the soldering reflow recommendations
- Do not exceed the peak temperature (T_p) of +260°C
- Use no-clean flux solder paste
- Do not wash the BM70/71 module as moisture can be trapped under the shield
- Use only one flow. If the PCB requires multiple flows, apply the BM70/71 module on the final flow

Figure 7-1 illustrates the reflow profile of the BM70/71 module.

FIGURE 7-1: REFLOW PROFILE
8.0 ORDERING GUIDE

**Note 1:** With the introduction of the IS187xSF-202 IC, the PC tools provided by Microchip, which change/control Bluetooth operation have been revised. The correct tool version must be paired with the applicable module/IC part number. All module parts ending with BM7xBLEX1FC2-0BxxAA must use the PC tools ending with 0BxxAA. All module parts ending with BM7xBLEX1FC2-0002AA must use the PC tools ending with 0002AA.

**Note 2:** Use the numbers listed in the “Orderable Part Number” column must be used when purchasing a specific module from Microchip.

**Note 3:** The “Regulatory Model No.” column represents the model numbers listed in Microchip’s regulatory notices. The extensions used to order/buy a specific version of the module are listed in the “Orderable Part Number” column.
APPENDIX A: CERTIFICATION NOTICES

The BM70 module (BM70BLES1FC2) has received the regulatory approval for the following countries:

- BT SIG/QDID: 74246
- United States/FCC ID: A8TBM70ABCDEFGH
- Canada
  - IC ID: 12246A-BM70BLES1F2
  - HVIN: BM70BLES1F2
- Europe/CE
- Japan/MIC: 202-SMD069
- Korea/KCC: MSIP-CRM-mcp-BM70BLES1FC2
- Taiwan/NCC No: CCAN15LP0500T1
- China/SRRC: CMIIT ID: 2015DJ7135

The BM71 module (BM71BLES1FC2) has received the regulatory approval for the following countries:

- BT SIG/QDID: 74246
- United States/FCC ID: A8TBM71S2
- Canada
  - IC ID: 12246A-BM71S2
  - HVIN: BM71BLES1FC2
- Europe/CE
- Japan/MIC: 005-101150
- Korea/KCC: MSIP-CRM-mcp-BM71BLES1FC2
- Taiwan/NCC No: CCAN16LP0010T5
- China/SRRC: CMIIT ID: 2016DJ2787

A.1 REGULATORY APPROVAL

This section outlines the regulatory information for the BM70/71 module for the following countries:

- United States
- Canada
- Europe
- Japan
- Korea
- Taiwan
- China
- Other Regulatory Jurisdictions

A.1.1 UNITED STATES

The BM70/71 module has received Federal Communications Commission (FCC) CFR47 Telecommunications, Part 15 Subpart C “Intentional Radiators” modular approval in accordance with Part 15.212 Modular Transmitter approval. Modular approval allows the end user to integrate the BM70/71 module into a finished product without obtaining subsequent and separate FCC approvals for intentional radiation, provided no changes or modifications are made to the module circuitry. Changes or modifications could void the user's authority to operate the equipment. The end user must comply with all of the instructions provided by the Grantee, which indicate installation and/or operating conditions necessary for compliance.

The finished product is required to comply with all applicable FCC equipment authorizations regulations, requirements and equipment functions not associated with the transmitter module portion. For example, compliance must be demonstrated to regulations for other transmitter components within the host product; to requirements for unintentional radiators (Part 15 Subpart B “Unintentional Radiators”), such as digital devices, computer peripherals, radio receivers, etc.; and to additional authorization requirements for the non-transmitter functions on the transmitter module (i.e., Verification, or Declaration of Conformity) (e.g., transmitter modules may also contain digital logic functions) as appropriate.

A.1.2 LABELING AND USER INFORMATION REQUIREMENTS

The BM70/71 module has been labeled with its own FCC ID number, and if the FCC ID is not visible when the module is installed inside another device, then the outside of the finished product into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording as follows:

For the BM70 module:

Contains Transmitter Module
FCC ID: A8TBM70ABCDEFGH
or
Contains FCC ID: A8TBM70ABCDEFGH
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For the BM71 module:

Contains Transmitter Module
FCC ID: A8TBM71S2
or
Contains FCC ID: A8TBM71S2
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

On the BM70 module, due to the limited module size (9.0 mm x 11.5 mm), the FCC identifier is displayed in the data sheet only and it cannot be displayed on the module label.
A user's manual for the finished product should include the following statement:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

Additional information on labeling and user information requirements for Part 15 devices can be found in KDB Publication 784748, which is available at the FCC Office of Engineering and Technology (OET) Laboratory Division Knowledge Database (KDB): http://apps.fcc.gov/oetcf/kdb/index.cfm.

A.2 Canada

The BM70/71 module has been certified for use in Canada under Industry Canada (IC) Radio Standards Specification (RSS) RSS-247 and RSS-Gen. Modular approval permits the installation of a module in a host device without the need to recertify the device.

A.2.1 LABELING AND USER INFORMATION REQUIREMENTS

Labeling Requirements for the Host Device (from Section 3.1, RSS-Gen, Issue 4, November 2014): The host device shall be properly labeled to identify the module within the host device.

On BM71 module, due to the limited module size (9.0 mm x 11.5 mm) the IC identifier is displayed in the data sheet only and cannot be displayed on the module label.

The Industry Canada certification label of a module shall be clearly visible at all times when installed in the host device, otherwise the host device must be labeled to display the Industry Canada certification number of the module, preceded by the words “Contains transmitter module”, or the word “Contains”, or similar wording expressing the same meaning, as follows:

For the BM70 module:

Contains transmitter module  
IC: 12246A-BM70BLES1F2

For the BM71 module:

Contains transmitter module  
IC: 12246A-BM71S2

User Manual Notice for License-Exempt Radio Apparatus (from Section 8.4, RSS-Gen, Issue 4, November 2014): User manuals for license-exempt radio apparatus shall contain the following or equivalent notice in a conspicuous location in the user manual or alternatively on the device or both:

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes: (1) l’appareil ne doit pas produire de brouillage, et (2) l’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.
Transmitter Antenna (from Section 8.3. RSS-Gen, Issue 4, November 2014): User manuals for transmitters shall display the following notice in a conspicuous location:

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

The preceding notice may be affixed to the device instead of displayed in the user manual.

A.2.2 RF EXPOSURE

All transmitters regulated by IC must comply with RF exposure requirements listed in RSS-102 - Radio Frequency (RF) Exposure Compliance of Radio communication Apparatus (All Frequency Bands).

A.2.3 HELPFUL WEB SITES

Industry Canada: http://www.ic.gc.ca/

A.3 Europe

The BM70/71 module is an R&TTE Directive assessed radio module that is CE marked and has been manufactured and tested with the intention of being integrated into a final product.

The BM70/71 module has been tested to R&TTE Directive 1999/5/EC Essential Requirements for Health and Safety (Article (3.1(a)), Electromagnetic Compatibility (EMC) (Article 3.1(b)), and Radio (Article 3.2) and are summarized in Table A-1/Table A-2. A Notified Body Opinion has also been issued.

The R&TTE Compliance Association provides guidance on modular devices in the document “Technical Guidance Note 01” which is available for download from the following location: http://www.rtteca.com/html/download_area.htm.

To maintain conformance to the testing listed in Table A-1/Table A-2: European Compliance Testing, the module shall be installed in accordance with the installation instructions in this data sheet and shall not be modified.

When integrating a radio module into a completed product the integrator becomes the manufacturer of the final product and is therefore responsible for demonstrating compliance of the final product with the essential requirements of the R&TTE Directive.

A.3.1 LABELING AND USER INFORMATION REQUIREMENTS

The label on the final product which contains the BM70/71 module must follow CE marking requirements. The R&TTE Compliance Association Technical Guidance Note 01 provides guidance on final product CE marking.

A.3.2 ANTENNA REQUIREMENTS

From the R&TTE Compliance Association document Technical Guidance Note 01.

Provided the integrator installing an assessed radio module with an integral or specific antenna and installed in conformance with the radio module manufacturer's installation instructions requires no further evaluation. Under Article 3.2 of the R&TTE Directive and does not require further involvement of an R&TTE Directive Notified Body for the final product. [Section 2.2.4]
The European Compliance Testing listed in Table A-1 and Table A-2 were performed using the integral ceramic chip antenna.

### A.3.3 HELPFUL WEB SITES

A document that can be used as a starting point in understanding the use of Short Range Devices (SRD) in Europe is the European Radio Communications Committee (ERC) Recommendation 70-03 E, which can be downloaded from the European Radio Communications Office (ERO) at: http://www.ero.dk/. Additional helpful web sites are:

- European Radio Communications Office (ERO): http://www.ero.dk
- The Radio and Telecommunications Terminal Equipment Compliance Association (R&TTE CA): http://www.rtteca.com

### A.4 Japan

The BM70/71 module has received type certification and is labeled with its own technical conformity mark and certification number as required to conform to the technical standards regulated by the Ministry of Internal Affairs and Communications (MIC) of Japan pursuant to the Radio Act of Japan.
Integration of this module into a final product does not require additional radio certification provided installation instructions are followed and no modifications of the module are allowed. Additional testing may be required:

- If the host product is subject to electrical appliance safety (for example, powered from an AC mains), the host product may require Product Safety Electrical Appliance and Material (PSE) testing. The integrator should contact their conformance laboratory to determine if this testing is required.
- There is an voluntary Electromagnetic Compatibility (EMC) test for the host product administered by VCCI: [http://www.vcci.jp/vcci_e/index.html](http://www.vcci.jp/vcci_e/index.html)

A.4.1 LABELING AND USER INFORMATION REQUIREMENTS

The label on the final product which contains the BM70/71 module must follow Japan marking requirements. The integrator of the module should refer to the labeling requirements for Japan available at the Ministry of Internal Affairs and Communications (MIC) website.

The BM70 module is labeled with its own technical conformity mark and certification number. The final product in which this module is being used must have a label referring to the type certified module inside:

On BM71 module, due to the limited module size (9.0 mm x 11.5 mm) the Japan identifier is displayed in the data sheet only and cannot be displayed on the module label. The final product in which this module is being used must have a label referring to the type certified module inside:

HELPFUL WEB SITES

Ministry of Internal Affairs and Communications (MIC): [http://www.tele.soumu.go.jp/e/index.htm](http://www.tele.soumu.go.jp/e/index.htm)

Association of Radio Industries and Businesses (ARIB): [http://www.arib.or.jp/english/](http://www.arib.or.jp/english/)

A.5 Korea

The BM70/71 module has received certification of conformity in accordance with the Radio Waves Act. Integration of this module into a final product does not require additional radio certification provided installation instructions are followed and no modifications of the module are allowed.

A.5.1 LABELING AND USER INFORMATION REQUIREMENTS

The label on the final product which contains the BM70/71 module must follow KC marking requirements. The integrator of the module should refer to the labeling requirements for Korea available on the Korea Communications Commission (KCC) website.

The BM70 module is labeled with its own KC mark. The final product requires the KC mark and certificate number of the module:

On the BM71 module, due to the limited module size (9.0 mm x 11.5 mm) the KC mark and identifier is displayed in the data sheet only and cannot be displayed on the module label. The final product requires the KC mark and certificate number of the module:

HELPFUL WEB SITES

Korea Communications Commission (KCC): [http://www.kcc.go.kr](http://www.kcc.go.kr)

A.6 Taiwan

The BM70/71 module has received compliance approval in accordance with the Telecommunications Act. Customers seeking to use the compliance approval in their product should contact Microchip Technology sales or distribution partners to obtain a Letter of Authority.

Integration of this module into a final product does not require additional radio certification provided installation instructions are followed and no modifications of the module are allowed.
A.6.1 LABELING AND USER INFORMATION REQUIREMENTS

The BM70 module is labeled with its own NCC mark and certificate number as below:

On the BM71 module, due to the limited module size (9.0 mm x 11.5 mm) the NCC mark and identifier is displayed in the data sheet only and cannot be displayed on the module label.

The user's manual should contain following warning (for RF device) in traditional Chinese:

注意！

依据低功率电波辐射性电波管理规定

第十二条 低功率射频电波，经型式许可，公司、商号或使用者均不得擅自变更频率、加大功率或变更原设计之特性及功能。

第十四条 低功率射频电波之使用不得影响飞航安全及干扰合法通信；

前项合法通信，指依电信规定作业之无线电通信；

低功率射频电波设备须忍受合法通信或工业、科学及医疗用电波辐射性电波设备之干扰。

A.7 China

The BM70/71 module has received certification of conformity in accordance with the China MIIT Notice 2014-01 of State Radio Regulation Committee (SRRC) certification scheme. Integration of this module into a final product does not require additional radio certification, provided installation instructions are followed and no modifications of the module are allowed.

A.7.1 LABELING AND USER INFORMATION REQUIREMENTS

The BM70 module is labeled with its own CMIIT ID as follows:

When Host system is using an approved Full Modular Approval (FMA) radio: The host must carry a label containing the statement “This device contains SRRC approved Radio module CMIIT ID: 2015DJ7135”.

On the BM71 module, due to the limited module size (9.0 mm x 11.5 mm) the CMIIT ID is displayed in the data sheet only and cannot be displayed on the module label:

When Host system is using an approved Full Modular Approval (FMA) radio: The host must carry a label containing the statement “This device contains SRRC approved Radio module CMIIT ID: 2016DJ2787”.

A.8 Other Regulatory Jurisdictions

Should other regulatory jurisdiction certification be required by the customer, or the customer need to recertify the module for other reasons, contact Microchip for the required utilities and documentation.
APPENDIX B: REVISION HISTORY

Revision A (October 2015)
This is the initial released version of the document.

Revision B (October 2015)
This revision includes the following changes as well as minor updates to text and formatting, which were incorporated throughout the document.

TABLE B-1: MAJOR SECTION UPDATES

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip’s customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under “Support”, click on “Customer Change Notification” and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:
- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

**Technical support is available through the web site at:** http://microchip.com/support
Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company’s quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
