Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Trademarks

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXA”, where “XXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE on-line help. Select the Help menu, and then Topics to open a list of available on-line help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the MRF89XAMxA PICtail™/PICtail Plus Daughter Board. Items discussed in this chapter include:

• Document Layout
• Conventions Used in this Guide
• Warranty Registration
• Recommended Reading
• The Microchip Web Site
• Development Systems Customer Change Notification Service
• Customer Support
• Document Revision History

DOCUMENT LAYOUT

This document describes how to use the MRF89XAMxA PICtail™/PICtail Plus Daughter Board. The manual layout is as follows:

• Chapter 1. “Overview” This chapter provides an overview of the MRF89XAMxA PICtail/PICtail Plus Daughter Board, including board contents and features.
• Chapter 2. “Getting Started” This chapter describes how to start using your MRF89XAMxA PICtail/PICtail Plus Daughter Board.
• Appendix A. “MRF89XAMxA PICtail/PICtail Plus Daughter Board Schematic” This appendix contains the schematics, PCB information and Bill of Materials for the MRF89XAMxA PICtail/PICtail Plus Daughter Board.
CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

WARRANTY REGISTRATION

Please complete the enclosed Warranty Registration Card and mail it promptly. Sending in the Warranty Registration Card entitles users to receive new product updates. Interim software releases are available at the Microchip web site.

RECOMMENDED READING

This user's guide describes how to use the MRF89XAMxA PICtail/PICtail Plus Daughter Board. Other useful documents are listed below. The following Microchip documents are available and recommended as supplemental reference resources.

- MRF89XA Ultra Low-Power Integrated ISM Band Sub-GHz Transceiver (DS70622)
- MRF89XAM8A 868 MHz Ultra Low-Power Sub-GHz Transceiver Module Data Sheet (DS70651)
- PICDEM™ PIC18 Explorer Demonstration Board User’s Guide (DS51721)
- Explorer 16 Development Board User’s Guide (DS51589)
- 2K SPI Bus Serial EEPROM with EUI-48™ Node Identity Data Sheet (DS22123)

THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user’s guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives
DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com, click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

• **Compilers** – The latest information on Microchip C compilers and other language tools. These include the MPLAB C18 and MPLAB C30 C compilers; MPASM™ and MPLAB ASM30 assemblers; MPLINK™ and MPLAB LINK30 object linkers; and MPLIB™ and MPLAB LIB30 object librarians.

• **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB ICE 2000 and MPLAB ICE 4000.

• **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debugger, MPLAB ICD 2.

• **MPLAB® IDE** – The latest information on Microchip MPLAB IDE, the Windows® Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB SIM simulator, MPLAB IDE Project Manager and general editing and debugging features.

• **Programmers** – The latest information on Microchip programmers. These include the MPLAB PM3 and PRO MATE II device programmers and the PICSTART® Plus and PICkit™ 1, 2, and 3 development programmers.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

• Distributor or Representative
• Local Sales Office
• Field Application Engineer (FAE)
• Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for the support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://support.microchip.com

DOCUMENT REVISION HISTORY

**Revision A (January 2011)**

• This is the initial release of the document.
Chapter 1. Overview

1.1 INTRODUCTION

The MRF89XAMxA PICtail™/PICtail Plus Daughter Board is a demonstration and development daughter board for the following modules:

- MRF89XAM8A Ultra Low-Power Sub-GHz Transceiver Module - 868 MHz (AC164138-1)
- MRF89XAM9A Ultra Low-Power Sub-GHz Transceiver Module - 915 MHz (AC164138-2)

The daughter board can be plugged into multiple Microchip Technology demonstration and development boards. For example, the daughter board is appropriate for 8-bit microcontroller development using the PIC18 Explorer Board (DM183032) or for 16-bit or 32-bit microcontroller development using the Explorer 16 Development Board (DM240001).

Supporting software stacks and application notes can be downloaded from the Microchip website http://www.microchip.com/wireless.

This chapter discusses these topics:
- MRF89XAMxA PICtail/PICtail Plus Daughter Board Contents
- MRF89XAMxA PICtail/PICtail Plus Daughter Board

1.2 MRF89XAMxA PICtail/PICtail PLUS DAUGHTER BOARD CONTENTS

Depending on the development tool ordered, package will contain one of the following development boards listed in Table 1-1.

<table>
<thead>
<tr>
<th>Description</th>
<th>Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>MRF89XAM8A PICtail/PICtail Plus Daughter Board – 868 MHz</td>
<td>AC164138-1</td>
</tr>
<tr>
<td>MRF89XAM9A PICtail/PICtail Plus Daughter Board – 915 MHz</td>
<td>AC164138-2</td>
</tr>
</tbody>
</table>

1.3 MRF89XAMxA PICtail/PICtail PLUS DAUGHTER BOARD

The MRF89XAMxA PICtail/PICtail Plus Daughter Board is a complete Ultra Low-Power Sub-GHz wireless transceiver. The features are shown in Figure 1-1.

**CAUTION**

Power to the MRF89XAMxA PICtail/PICtail Plus Daughter Board should be in the range of 2.1–3.6V. Ensure that the development/demonstration board that the daughter board is plugged into meets this voltage requirement; otherwise, damage to the MRF89XA might occur.
PICtail™ and PICtail Plus Connectors

PICtail Plus Connector (P1) – 30-pin card edge connector for connecting to the 16-bit and 32-bit development boards’ PICtail Plus connector.

PICtail Connector (P2) – 28-pin right angle connector to connect to the 8-bit development boards’ PICtail connector.

MRF89XAM8A (U1) – Ultra Low-Power Sub-GHz transceiver module – 868 MHz.

MRF89XAM9A (U1) – Ultra Low-Power Sub-GHz transceiver module – 915 MHz.

Power Disconnect/Current Measure Jumpers (JP1/JP2) – Two 2-pin headers are connected in parallel. A shunt on one of the two headers connects power to the MRF89XAMxM module. A current meter can be placed on the open header and when the shunt is removed from the opposite header, current consumption can be measured without interrupting power. A useful cable that can be connected to the 2-pin header and current meter, using banana plugs, is the XLP Current Measurement Cable (AC002023).

INT2 Jumper (JP3) – Jumpering JP3 with a shunt allows you to connect RA5 to RB2/INT2, this enables push button switch S2 to trigger an interrupt. For more information, see Section 2.2.1 “Configuring Push Button Switch S2 to RB2/INT2”.

EUI Node Identity Serial EEPROM (U3) – Contains a unique IEEE EUI address. For more information, refer to the “2K SPI Bus Serial EEPROM with EUI-48™ Node Identity Data Sheet” (DS22123).
Chapter 2. Getting Started

2.1 INTRODUCTION

The MRF89XAMxA PICtail/PICtail Plus Daughter Board can be plugged into multiple Microchip Technology demonstration and development boards. This allows the developer to choose the microcontroller that best suits the customer’s development environment.

The PICtail connector right-angle header, P2, can be plugged into the PIC18 Explorer Development Board (DM183032). The PICtail Plus card-edge connector, P1, can be plugged into Explorer 16 Development Board (DM240001).

This chapter describes how the daughter board is plugged into the PIC18 Explorer and Explorer 16 Development Boards.

2.2 PLUGGING INTO THE PIC18 EXPLORER BOARD

The MRF89XAMxA PICtail/PICtail Plus Daughter Board can be plugged into the PIC18 Explorer Board PICtail connector, J3, as shown in Figure 2-1. Make sure to align pin 1 to RE2 as shown.

CAUTION

Ensure that the PIC18F87J11 PIM is plugged into the PIC18 Explorer Board. This sets the system VDD voltage to 3.3 volts, which is required by the MRF89XAMxA PICtail/PICtail Plus Daughter Board.

2.2.1 Configuring Push Button Switch S2 to RB2/INT2

On the PIC18 Explorer Board, push button switch S2 is normally connected to I/O port pin RA5. RA5 is not an interrupt-on-change or external interrupt capable I/O pin. Jumpering JP3 with a shunt allows the connection of RA5 to RB2/INT2 to allow push button switch S2 to trigger an interrupt. Remember that RB2 also connects to pin 10 (input) of U6 (RS232 level shifter), which is a Clear-to-Send (CTS) signal on P2 pin 8 (DE9 receptacle).
2.3 PLUGGING INTO THE EXPLORER 16 DEVELOPMENT BOARD

The MRF89XAMxA PICtail/PICtail Plus Daughter Board can be plugged into the Explorer 16 Development Board as shown in Figure 2-2.

The MRF89XAMxA PICtail/PICtail Plus Daughter Board’s 30-pin card edge connector is plugged into the top section of the PICtail Plus connector. This will connect to the SPI Port 1 on the PIC® microcontroller that is plugged into the Plug In Module (PIM) socket.

The MRF89XAMxA PICtail/PICtail Plus Daughter Board’s 30-pin card edge connector is plugged into the mid-section of the PICtail Plus connector. This will connect to the SPI Port 2 on the PIC microcontroller that is plugged into the PIM socket.
2.4 DOWNLOADING AND RUNNING THE DEMO PROGRAM

A Quick Start Guide is included in the software installation package that explains the installation and operation of the demonstration program. It may be downloaded from the Microchip website http://www.microchip.com/miwi.
Appendix A. MRF89XAMxA PICtail/PICtail Plus Daughter Board Schematic

A.1 INTRODUCTION

This appendix provides the MRF89XAMxA PICtail/PICtail Plus Daughter Board schematics, PCB layout and Bill of Materials (BOM).
