Introduction

USB Host Interface (UHI) for Human Interface Device Mouse (HID Mouse) provides an interface for the configuration and management of USB HID mouse host.

The outline of this documentation is as follows:

• API Overview
• Quick Start Guide for USB Host Mouse Module (UHI Mouse)
• Configuration File Examples

For more details for Atmel® Software Framework (ASF) USB Host Stack, refer to following application note:

• AVR4950: ASF - USB Host Stack

2. API Overview

2.1. Macro Definitions

2.1.1. Interface with USB Host Core (UHC)
Define and functions required by UHC.

2.1.1.1. Macro UHI_HID_MOUSE

```
#define UHI_HID_MOUSE
```

Global define which contains standard UHI API for UHC.
It must be added in USB_HOST_UHI define from conf_usb_host.h file.

2.1.2. UHI for Human Interface Device Mouse Class
Common APIs used by high level application to use this USB host class.
These APIs require only callback definitions in conf_usb_host.h file through following defines:

2.1.2.1. Macro UHI_HID_MOUSE_CHANGE

```
#define UHI_HID_MOUSE_CHANGE(dev, b_plug)
```

2.1.2.2. Macro UHI_HID_MOUSE_EVENT_BTN_LEFT

```
#define UHI_HID_MOUSE_EVENT_BTN_LEFT(b_state)
```

2.1.2.3. Macro UHI_HID_MOUSE_EVENT_BTN_RIGHT

```
#define UHI_HID_MOUSE_EVENT_BTN_RIGHT(b_state)
```

2.1.2.4. Macro UHI_HID_MOUSE_EVENT_BTN_MIDDLE

```
#define UHI_HID_MOUSE_EVENT_BTN_MIDDLE(b_state)
```

2.1.2.5. Macro UHI_HID_MOUSE_EVENT_MOUVE

```
#define UHI_HID_MOUSE_EVENT_MOUVE(x, y, scroll)
```

2.2. Function Definitions

2.2.1. Functions Required by UHC

2.2.1.1. Function uhi_hid_mouse_install()

Install interface Allocate interface endpoints if supported.

```
uhc_enum_status_t uhi_hid_mouse_install(
                   uhc_device_t * dev)
```
Table 2-1. Parameters

<table>
<thead>
<tr>
<th>Data direction</th>
<th>Parameter name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[in]</td>
<td>uhc_device_t</td>
<td>Device to request</td>
</tr>
</tbody>
</table>

**Returns**
Status of the install.

2.2.1.2. Function uhi_hid_mouse_enable()

Enable the interface.

```c
void uhi_hid_mouse_enable(
    uhc_device_t * dev)
```

Enable a USB interface corresponding to UHI.

Table 2-2. Parameters

<table>
<thead>
<tr>
<th>Data direction</th>
<th>Parameter name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[in]</td>
<td>uhc_device_t</td>
<td>Device to request</td>
</tr>
</tbody>
</table>

2.2.1.3. Function uhi_hid_mouse_uninstall()

Uninstall the interface (if installed).

```c
void uhi_hid_mouse_uninstall(
    uhc_device_t * dev)
```

Table 2-3. Parameters

<table>
<thead>
<tr>
<th>Data direction</th>
<th>Parameter name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[in]</td>
<td>uhc_device_t</td>
<td>Device to request</td>
</tr>
</tbody>
</table>
Quick Start Guide for USB Host Mouse Module (UHI Mouse)

This is the quick start guide for the USB Host Mouse Module (UHI Mouse) with step-by-step instructions on how to configure and use the modules in a selection of use cases.

The use cases highlights several code fragments. The code fragments in the steps for setup can be copied into a custom initialization function, while the steps for usage can be copied into, e.g., the main application function.

3.1. Basic Use Case

In this basic use case, the "USB Host HID Mouse (Single Class support)" module is used. The "USB Host HID Mouse (Multiple Classes support)" module usage is described in Advanced Use Cases.

3.1.1. Setup Steps

As a USB host, it follows common USB host setup steps. Refer to USB Host Basic Setup.

3.1.2. Usage Steps

3.1.2.1. Example Code

Content of conf_usb_host.h:

```c
#define USB_HOST_UHI UHI_HID_MOUSE
#define UHI_HID_MOUSE_CHANGE(dev, b_plug) my_callback_mouse_change(dev, b_plug)
extern bool my_callback_mouse_change(uhc_device_t* dev, bool b_plug);
#define UHI_HID_MOUSE_EVENT_BTN_LEFT(b_state) my_callback_event_btn_left(b_state)
extern void my_callback_event_btn_left(bool b_state);
#define UHI_HID_MOUSE_EVENT_BTN_RIGHT(b_state) my_callback_event_btn_right(b_state)
extern void my_callback_event_btn_right(bool b_state);
#define UHI_HID_MOUSE_EVENT_BTN_MIDDLE(b_state) my_callback_event_btn_middle(b_state)
extern void my_callback_event_btn_middle(bool b_state);
#define UHI_HID_MOUSE_EVENT_MOUSE(x, y, scroll) my_callback_event_mouse(x, y, scroll)
extern void my_callback_event_mouse(int8_t x, int8_t y, int8_t scroll);
#include "uhi_hid_mouse.h"
```

Add to application C-file:

```c
bool my_callback_mouse_change(uhc_device_t* dev, bool b_plug)
{
    if (b_plug) {
        my_display_on_mouse_icon();
    } else {
        my_display_off_mouse_icon();
    }
}

void my_callback_event_btn_left(bool b_state)
{
    if (b_state) {
        // Here mouse button left pressed
    }
}
```
void my_callback_event_mouse(int8_t x, int8_t y, int8_t scroll)
{
    if (!x) {
        // Here mouse are moved on axe X
        cursor_x += x;
    }
    if (!y) {
        // Here mouse are moved on axe Y
        cursor_y += y;
    }
    if (!scroll) {
        // Here mouse are moved the wheel
        wheel += scroll;
    }
}

3.1.2.2. Workflow

1. Ensure that conf_usb_host.h is available and contains the following configuration which is the USB host mouse configuration:

```c
#define USB_HOST_UHI   UHI_HID_MOUSE
```

Note: It defines the list of UHI supported by USB host.

```c
#define UHI_HID_MOUSE_CHANGE(dev, b_plug) my_callback_mouse_change(dev, b_plug)
extern bool my_callback_mouse_change(uhc_device_t* dev, bool b_plug);
```

Note: This callback is called when a USB device mouse is plugged or unplugged.

```c
#define UHI_HID_MOUSE_EVENT_BTN_LEFT(b_state) my_callback_event_btn_left(b_state)
#define UHI_HID_MOUSE_EVENT_BTN_RIGHT(b_state) my_callback_event_btn_right(b_state)
#define UHI_HID_MOUSE_EVENT_BTN_MIDDLE(b_state) my_callback_event_btn_middle(b_state)
#define UHI_HID_MOUSE_EVENT_MOVE(x, y, scroll) my_callback_event_mouse(x, y, scroll)
extern void my_callback_event_mouse(int8_t x, int8_t y, int8_t scroll)
```

Note: These callbacks are called when a USB device mouse event is received.

3.2. Advanced Use Cases

For more advanced use of the UHI HID mouse module, see the following use cases:

- Enable USB High Speed Support
- Multiple Classes Support
- Dual Roles Support
3.3. **Enable USB High Speed Support**  
In this use case, the USB host is used to support USB high speed.

3.3.1. **Setup Steps**  
Prior to implement this use case, be sure to have already applied the UHI module "basic use case".

3.3.2. **Usage Steps**

3.3.2.1. **Example Code**  
Content of `conf_usb_host.h`:

```c
#define USB_HOST_HS_SUPPORT
```

3.3.2.2. **Workflow**

1. Ensure that `conf_usb_host.h` is available and contains the following parameters required for a USB device high speed (480Mbit/s):

```c
#define USB_HOST_HS_SUPPORT
```

3.4. **Multiple Classes Support**  
In this use case, the USB host is used to support several USB classes.

3.4.1. **Setup Steps**  
Prior to implement this use case, be sure to have already applied the UHI module "basic use case".

3.4.2. **Usage Steps**

3.4.2.1. **Example Code**  
Content of `conf_usb_host.h`:

```c
#define USB_HOST_UHI   UHI_HID_MOUSE, UHI_MSC, UHI_CDC
```

3.4.2.2. **Workflow**

1. Ensure that `conf_usb_host.h` is available and contains the following parameters:

```c
#define USB_HOST_UHI   UHI_HID_MOUSE, UHI_MSC, UHI_CDC
```

**Note:** `USB_HOST_UHI` defines the list of UHI supported by USB host. Here, you must add all classes that you want to support.

3.5. **Dual Roles Support**  
In this use case, the USB host and USB device are enabled, it is the dual role.

**Note:** On the Atmel boards, the switch of USB role is managed automatically by the USB stack thank to a USB On-The-Go (OTG) connector and its USB ID pin. Refer to section "Dual roles" for further information in the application note.
3.5.1. Setup Steps

Prior to implement this use case, be sure to have already applied the UHI module "basic use case".

3.5.2. Usage Steps

3.5.2.1. Example Code

Content of conf_usb_host.h:

```c
#define UHC_MODE_CHANGE(b_host_mode)   my_callback_mode_change(b_host_mode)
extern void my_callback_mode_change(bool b_host_mode);
```

Add to application C-file:

```c
void usb_init(void)
{
    //udc_start();
    uhc_start();
}

bool my_host_mode;
void my_callback_mode_change(bool b_host_mode)
{
    my_host_mode = b_host_mode;
}

void my_usb_task(void)
{
    if (my_host_mode) {
        // CALL USB Host task
    } else {
        // CALL USB Device task
    }
}
```

3.5.2.2. Workflow

1. In case of USB dual roles (Device and Host), the USB stack must be enabled by uhc_start() and the udc_start() must not be called.

```c
//udc_start();
uhc_start();
```

2. In dual role, to know the current USB mode, the callback to notify the mode changes can be used.

   - Ensure that conf_usb_host.h contains the following parameters:

     ```c
     #define UHC_MODE_CHANGE(b_host_mode)      my_callback_mode_change(b_host_mode)
     extern void my_callback_mode_change(bool b_host_mode);
     ```

   - Ensure that application contains the following code:

     ```c
     bool my_host_mode;
     void my_callback_mode_change(bool b_host_mode)
     {
         my_host_mode = b_host_mode;
     }

     void my_usb_task(void)
     {
     ```
if (my_host_mode) {
    // CALL USB Host task
} else {
    // CALL USB Device task
}
4. Configuration File Examples

4.1. conf_usb_host.h

5. **USB Host Basic Setup**

5.1. **USB Host User Configuration**

The following USB host configuration must be included in the conf_usb_host.h file of the application:

1. **USB_HOST_UHI (List of UHI APIs).**
   Define the list of UHI supported by USB host. (E.g.: UHI_MSC, UHI_HID_MOUSE).

2. **USB_HOST_POWER_MAX (mA).**
   Maximum current allowed on Vbus.

3. **USB_HOST_HS_SUPPORT (Only defined).**
   Authorize the USB host to run in High Speed.

4. **USB_HOST_HUB_SUPPORT (Only defined).**
   Authorize the USB HUB support.

5.2. **USB Host User Callback**

The following optional USB host callback can be defined in the conf_usb_host.h file of the application:

1. **void UHC_MODE_CHANGE (bool b_host_mode).**
   To notify that the USB mode are switched automatically. This is possible only when ID pin is available.

2. **void UHC_VBUS_CHANGE (bool b_present).**
   To notify that the Vbus level has changed (Available only in USB hardware with Vbus monitoring).

3. **void UHC_VBUS_ERROR (void).**
   To notify that a Vbus error has occurred (Available only in USB hardware with Vbus monitoring).

4. **void UHC_CONNECTION_EVENT (uhc_device_t* dev, bool b_present).**
   To notify that a device has been connected or disconnected.

5. **void UHC_WAKEUP_EVENT (void).**
   Called when a USB device or the host have wake up the USB line.

6. **void UHC_SOF_EVENT (void).**
   Called for each received SOF each 1ms. Available in High and Full speed mode.

7. **uint8_t UHC_DEVICE_CONF (uhc_device_t* dev).**
   Called when a USB device configuration must be chosen. Thus, the application can choose either a configuration number for this device or a configuration number 0 to reject it. If callback not defined the configuration 1 is chosen.

8. **void UHC_ENUM_EVENT (uhc_device_t* dev, uint8_t b_status).**
   Called when a USB device enumeration is completed or failed.
5.3. **USB Host Setup Steps**

5.3.1. **USB Host Controller (UHC) - Prerequisites**

Common prerequisites for all USB hosts.

This module is based on USB host stack full interrupt driven and supporting sleepmgr. For AVR® and Atmel® | SMART ARM®-based SAM3/4 devices the clock services is supported. For SAM D21 devices the clock driver is supported.

The following procedure must be executed to setup the project correctly:

- Specify the clock configuration:
  - UC3 and SAM3/4 devices without USB high speed support need 48MHz clock input. You must use a PLL and an external OSC.
  - UC3 and SAM3/4 devices with USB high speed support need 12MHz clock input. You must use an external OSC.
  - UC3 devices with USBC hardware need CPU frequency higher than 25MHz
  - SAM D21 devices without USB high speed support need 48MHz clock input. You must use a DFLL and an external OSC.
- In conf_board.h, the define CONF_BOARD_USB_PORT must be added to enable USB lines. (Not mandatory for all boards).
- Enable interrupts
- Initialize the clock service

The usage of sleep manager service is optional, but recommended to reduce power consumption:

- Initialize the sleep manager service
- Activate sleep mode when the application is in IDLE state

For AVR and SAM3/4 devices, add to the initialization code:

```c
sysclk_init();
irq_initialize_vectors();
cpu_irq_enable();
board_init();
sleepmgr_init(); // Optional
```

For SAM D21 devices, add to the initialization code:

```c
system_init();
irq_initialize_vectors();
cpu_irq_enable();
sleepmgr_init(); // Optional
```

Add to the main IDLE loop:

```c
sleepmgr_enter_sleep(); // Optional
```

5.3.2. **USB Host Controller (UHC) - Example Code**

Common example code for all USB hosts.

Content of conf_usb_host.h:

```c
#define USB_HOST_POWER_MAX 500
```
Add to application C-file:

```c
void usb_init(void)
{
    uhc_start();
}
```

5.3.3. **USB Device Controller (UHC) - Workflow**

Common workflow for all USB devices.

1. Ensure that `conf_usb_host.h` is available and contains the following configuration which is the main USB device configuration:

   ```c
   // Maximum current allowed on Vbus (mA) which depends of 5V generator
   #define USB_HOST_POWER_MAX 500 // (500mA)
   ```

2. Call the USB host stack start function to enable USB Host stack:

   ```c
   uhc_start();
   ```

5.4. **conf_clock.h Examples**

Content of `conf_clock.h` for AT32UC3A0, AT32UC3A1, and AT32UC3B devices (USBB):

```c
// Configuration based on 12MHz external OSC:
#define CONFIG_PLL1_SOURCE PLL_SRC_OSC0
#define CONFIG_PLL1_MUL 8
#define CONFIG_PLL1_DIV 2
#define CONFIG_USBCLOCK_SOURCE USBCLOCK_PLL1
#define CONFIG_USBCLOCK_DIV 1 // Fusb = Fsys/(2 ^ USB_div)
```

Content of `conf_clock.h` for AT32UC3A3 and AT32UC3A4 devices (USBB with high speed support):

```c
// Configuration based on 12MHz external OSC:
#define CONFIG_USBCLOCK_SOURCE USBCLOCK_PLL1
#define CONFIG_USBCLOCK_DIV 1 // Fusb = Fsys/(2 ^ USB_div)
```

Content of `conf_clock.h` for AT32UC3C device (USBC):

```c
// Configuration based on 12MHz external OSC:
#define CONFIG_PLL1_SOURCE PLL_SRC_OSC0
#define CONFIG_PLL1_MUL 8
#define CONFIG_PLL1_DIV 2
#define CONFIG_USBCLOCK_SOURCE USBCLOCK_PLL1
#define CONFIG_USBCLOCK_DIV 1 // Fusb = Fsys/(2 ^ USB_div)
// CPU clock need of clock > 25MHz to run with USBC
#define CONFIG_SYSCLK_SOURCE SYSCLK_PLL1
```

Content of `conf_clock.h` for SAM3X and SAM3A devices (UOTGHS: USB OTG High Speed):

```c
// USB Clock Source fixed at UPLL.
#define CONFIG_USBCLOCK_SOURCE USBCLOCK_UPLL
#define CONFIG_USBCLOCK_DIV 1
```

Content of `conf_clocks.h` for SAM D21 devices (USB):

```c
// USB Clock Source fixed at DFLL.
// SYSTEM_CLOCK_SOURCE_XOSC32K configuration - External 32KHz crystal/clock oscillator
#define CONF_CLOCK_XOSC32K_ENABLE true
```
# define CONF_CLOCK_XOSC32K_EXTERNAL_CRYSTAL
SYSTEM_CLOCK_EXTERNAL_CRYSTAL
# define CONF_CLOCK_XOSC32K_STARTUP_TIME
SYSTEM_XOSC32K_STARTUP_TIME_65536
