ASF: Release ASF-3.21

The Atmel® Software Framework (ASF, www.atmel.com/asf) is a compilation of embedded software for Atmel flash MCUs: megaAVR®, AVR XMEGA®, AVR UC3 and SAM devices. It has been designed to help develop and glue together the different components of a software design. It can easily integrate into an operating system (OS) or run as a stand-alone product.

The ASF is included in Atmel Studio® 6 (www.atmel.com/atmelstudio). A separate package is available for megaAVR, AVR XMEGA, AVR UC3 and SAM users for IAR™, Atmel AVR Studio 4 and AVR32 Studio on www.atmel.com/asf. Atmel Studio users do not need this package as the ASF is integrated in Atmel Studio.

This document describes the supported devices, supported tools, and changes since last ASF release (enhancements, bugs fixes and known issues).

• **Issue #ASFP-5038:** Support for Remote Node Configuration Feature in Performance Analyzer Firmware.

Add support for a new Performance analyzer mode to be used for remote wireless commanding of a DUT for the purpose of FCC or other RF regulatory testing.

The following functionality needs to be implemented:
1. The Ability to initiate the CW test mode over an RF wireless link to the remote DUT.
2. The ability to set on remote DUT for parameters like TX power level, Select antenna, select CW vs PRBS transmission mode, Set duration of CW test or timeout.
3. The ability to configure DUT continuous packet transmissions with programmable delay between frames.
4. Continuous RX_ON mode. This is used to make RX only measurements of digital emissions where the DUT must be in RX mode but cannot transmit for any reason when in this mode.

• **Issue #ASFP-5049:** WSNDemo and Performance Analyzer Application-Components cannot be reused with other components in Application.
Performance Analyzer and WSNDemo(LWMesh) applications are available as components in ASF. But it is not possible to use them along with other components since the component has a while(1) and hence other components cannot be added along with them. Hence these needs to be modified into a component init and component task functions so as to support adding other components along with this component.

- Issue #ASFP-5066: Update the support link in files.
  Add the support link "http://www.atmel.com/design-support" to document

Known issues

- Issue #ASFP-184: AT42QT1060 driver - use of EIC hardcoded for EVK1105 only.
  AT42QT1060 component is not supported by the AT32UC3A0 and AT32UC3A1 device family.

- Issue #ASFP-198: PolarSSL needs to be updated to version 1.0.0 to solve build error.
  Header file "openssl.h" from polarssl version 0.14.0 has some wrong function definition that creates build error. Update to version 0.99 will solve the issue

- Issue #ASFP-674: common/components/memory/data_flash/at45dbx is not listed for any devices in AVR Studio 5 ASF menu.
  Some AT45DBX definitions are missing in board definition causing module errors when using it in AVR Studio 5 with those boards. Modified file : avr32/boards/uc3_a3_xplained/uc3_a3_xplained.h ,xmega/boards/xmega_a1_xplained/xmega_a1_xplained.h

- Issue #ASFP-881: XMEGA NVM driver does not support XMEGA A3 rev B errata.
  XMEGA NVM driver does not support XMEGA A3 rev B errata.

- Issue #ASFP-882: Sensor library fails compilation if not using a board in the 'Xplained' series of boards.
  Sensor library fails compilation if not using an board in the "Xplained" series of boards.

- Issue #ASFP-3595: ASF includes its own SAM header files set which is not synchronized with the latest header files from Atmel Studio 6.1 toolchain.
  The Atmel Studio 6.1beta header files set for SAM devices is not backward compatible with the Atmel Studio 6.0 header files set.
  ASF SAM drivers are using their own set of header files (from sam/utils/cmsis/sam*/include) and are not compatible with the Atmel Studio 6.1beta header files.
  SAM drivers will be ported to the new Atmel Studio 6.1beta header files set in a later ASF release.

- Issue #ASFP-4502: Some standalone ASF applications in Application Builder do not work.
  The following ASF modules are not available as standalone in the "Select Drivers from the ASF" menu, but only as examples: XMEGA Sleep Manager and ADC driver, AVR UC3 USB Stack from ASF v1,
ECC Hamming, TLV320AIC23B codec, FAT file system with play list support, Joystick interface (5-way), MEMORY - EBI SDRAM Controller, MEMORY - MCI - MultiMedia Card Interface, MEMORY - SD/MMC card access using MCI, MEMORY - SD/MMC card access using SPI, MEMORY - NAND Flash on EBI, MEMORY - AT45DBX DataFlash, TOUCH - AT42QT1060 QTouch 6-channel sensor, MEMS Sensors - Accelerometer LIS3L06AL, TIMING - CS2200 Clock Synthesizer, LodePNG, FreeRTOS minimal, lwIP, Micrium uC/OSII, H&D Wi-Fi SPB Firmware Download.
