Features

- Very Low Gate Threshold Voltage
- Designed to be Source-driven
- Low Switching Losses
- Low Effective Output Capacitance
- Designed for Inductive Loads

Applications

- Medical Ultrasound Beamforming
- Ultrasonic Array-focusing Transmitter
- Piezoelectric Transducer Waveform Drivers
- High-speed Arbitrary Waveform Generator
- Normally-on Switches
- Solid-state Relays
- Constant Current Sources
- Power Supply Circuits

General Description

The DN2625 is a low-threshold Depletion-mode (normally-on) transistor that utilizes an advanced vertical DMOS structure and a well-proven silicon gate manufacturing process. This combination produces a device with the power handling capabilities of bipolar transistors as well as the high input impedance and positive temperature coefficient inherent in Metal-Oxide Semiconductor (MOS) devices. Characteristic of all MOS structures, this device is free from thermal runaway and thermally induced secondary breakdown.

Vertical DMOS Field-Effect Transistors (FETs) are ideally suited to a wide range of switching and amplifying applications where high breakdown voltage, high input impedance, low input capacitance and fast switching speeds are desired.

The DN2625DK6-G contains two MOSFETs in an 8-lead, dual-pad DFN package. The DN2625 contains a single MOSFET in a TO-252 D-PAK package.

Package Types

See Table 3-1 and Table 3-2 for pin information.

† Notice: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

Note 1: Distance of 1.6 mm from case for 10 seconds

5.0 PACKAGING INFORMATION

5.1 Package Marking Information

Legend:

- XX...X Product Code or Customer-specific information
- Y Year code (last digit of calendar year)
- YY Year code (last 2 digits of calendar year)
- WW Week code (week of January 1 is week '01')
- NNN Alphanumeric traceability code
-overscript(overscript(overscript(overscript(overscript(Y, E) & Y, E) & W, E) & N, E) & N, E) Pb-free JEDEC® designator for Matte Tin (Sn)
- * This package is Pb-free. The Pb-free JEDEC designator (overscript(E, E)) can be found on the outer packaging for this package.

Note: In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for product code or customer-specific information. Package may or not include the corporate logo.

APPENDIX A: REVISION HISTORY

Revision A (December 2016)

- Converted Supertex Document DSFP-DN2625 to Microchip DS20005537B
- Removed obsolete package, 14-lead QFN
- Changed the TO-252 D-PAK packaging quantity from 1000/Bag to 2000/Reel
- Revised the Features section

Revision B (May 2017)

- Corrected the 8L DFN Package Outline dimensions by changing it from 4 mm x 4 mm body/1 mm height/1 mm pitch to 5 mm x 5 mm body/0.9 mm height/1.27 mm pitch
- Made minor text changes throughout the document
# PRODUCT IDENTIFICATION SYSTEM

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip’s Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip’s code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.
